Eligibility and Participation for the WIC Program

The intent of this second followup report is to provide information on the range of breastfeeding promotion activities that have taken place since the publication of the first followup report. These activities include professional education, public education, support in the health care system, support services in the community, support in the workplace, research, data collection, etc. It is hoped that this report will stimulate interest, serve as a resource for the planning of future breastfeeding promotion efforts, and increase support from all who can have an impact on breastfeeding decisions

and opportunities.

About a dozen federally supported child nutrition programs and related activities -- including the Special Supplemental Nutrition Program for Women, Infants, and Children (the WIC program) -- reach over 36 million children and almost 2 million lower-income pregnant and postpartum women. The School Lunch and School Breakfast programs

provide cash subsidies to participating schools and residential child care institutions (RCCIs) for all meals they serve; larger subsidies are granted for free and reduced-price meals served to lower-income children. The Child and Adult Care Food Program (CACFP) subsidises meals and snacks served by child care centres and day care homes; in centres, higher subsidies are given for meals/snacks served to lower-income children,

while subsidies for homes generally are not varied by children's family income (but are larger for homes in lower-income areas or operated by lower-income providers). Schools, RCCIs, and other public and private non-profit organisations operating programs for children also can receive subsidies for snacks (and, in some cases, meals) served in after-school and other outside-of-school settings. The Summer Food Service Program subsidises food service operations by public and private non-profit sponsors in lower-income areas during the summer; all meals/snacks they serve are subsidised, generally without regard to individual children's family income. The Special Milk Program operates in schools and RCCIs without a lunch program and subsidises all milk they serve. All these subsidies are inflation-indexed and are paid only where the subsidised meals/snacks meet federal nutrition standards. In addition to cash aid, many providers receive food commodities from the Agriculture Department, at a set value per meal (and may receive 'bonus' commodities from stocks acquired for agricultural support purposes). Grants also are made to help cover state administrative expenses. And, the WIC program provides nutrition services and tailored food packages to lower-income pregnant, breastfeeding, and postpartum women,

infants, and children who are judged to be at nutritional risk. Other significant federal programs/activities include: a WIC farmers' market nutrition program, support for a Food Service Management Institute, and initiatives to improve meal quality, food service, and safety. National Academies Press Dietary Risk Assessment in the WIC Program reviews methods used to determine dietary risk based on failure to meet Dietary Guidelines for applicants to the Special Supplemental Nutrition Program for Women, Infants, and

Children (WIC). Applicants to the WIC program must be at nutritional risk to be eligible for program benefits. Although "dietary risk" is only one of five nutrition risk categories, it is the category most commonly reported among WIC applicants. This book documents that nearly all low-income women in the childbearing years and children 2 years and over are at risk because their diets fail to meet the recommended numbers of servings of the food guide pyramid. The committee recommends that all women and children (ages 2-4 years) who meet the eligibility requirements based on income, categorical and residency status also be presumed to meet the requirement of

nutrition risk. By presuming that all who meet the categorical and income eligibility requirements are at dietary risk, WIC retains its potential for preventing and correcting nutrition-related problems while avoiding serious misclassification errors that could lead to denial of services for eligible individuals.

Poverty is a pressing and persistent problem. While its extent varies across countries, its presence always represents the diminution of human capacity. Therefore, it seems natural to want to do something about it. Have countries made progress in mitigating poverty? How do we determine who is poor and who is not poor? What intuitions or theories guide the design of anti-poverty policy? Is overall labor market performance the key to keeping the poverty rate low? Or, does it matter how well-connected an individual is to those who know about the availability of jobs? Does being an immigrant increase the odds of being poor? Are there anti-poverty policies that work? For whom do they work? If I'm poor, will I have access to health care and housing? Am I more likely to be obese, polluted upon, incarcerated, un-banked, and without assets if I'm poor? Is poverty too hard a problem for economic analysis? These are some of the questions that a distinguished group of scholars have come together to confront in this Handbook. The Handbook is written in a highly-accessible style that encourages the reader to think critically about poverty. Theories are presented in a rigorous but not overly-technical way; concise and straightforward empirical analyses enlighten key policy issues. The volume has six parts: Poverty in the 21st Century; Labor Market Factors; Poverty Policy; Poverty Dynamics; Dimensions of Poverty; and Trends and Issues in Anti-Poverty Policy. A goal of the Handbook is to stimulate further research on poverty. To that end, several chapters challenge conventional thinking about poverty and in some cases present specific proposals for the reform of economic and social policy. Florida Administrative Weekly Simon and Schuster Methods. --- Analyses presented in this report were obtained from a study conducted by the Healthy Start Systems Development Program. Data for these analyses were obtained from Vital Statistics 1994 birth files; eligibility and enrollment data from the Agency for Health Care Administration (ACHA); Healthy Start screening

records; and WIC registration information.

Food and Nutrition A E I Press
The Food and Nutrition Board of the Institute of Medicine (IOM), part of the National Academies, was asked to evaluate the use of various dietary assessment tools and to make recommendations for the assessment of inadequate or inappropriate dietary patterns. These assessments should accurately identify dietary risk of individuals and thus eligibility for participation in the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC). The

Committee on Dietary Risk Assessment in the WIC Program was appointed for the 2-year study and directed to develop an interim report which was to include (1) a framework for assessing inadequate diet or inappropriate dietary patterns, (2) a summary of a workshop on methods to assess dietary risk, and (3) the results of literature searches conducted to date. This interim report includes these three components. Building on the approach used in the 1996 IOM report, WIC Nutrition Risk Criteria, the framework proposed by the committee identifies characteristics of

dietary assessment tools that can identify dietary patterns or behaviors for which there is scientific evidence of increased nutrition or health risk in either the short or long-term. The proposed framework consists of eight characteristics that a food intake and/or behavior-based tool should have when used to determine eligibility to participate in WIC programs. This interim report also includes authored summaries of the presentations at the workshop, along with the results of literature searches conducted in the initial phase of the study.

WIC Nutrition Risk Criteria

National Academies Press
Each year the U.S.
Department of Agriculture
(USDA) must estimate the
number of people who are
eligible to participate in the
Special Supplemental
Nutrition Program for
Women, Infants, and
Children (WIC). These
USDA estimates have come
under critical scrutiny in part
because the number of infants
and postpartum women who
have actually enrolled in the
program has exceeded the
number estimated to be
eligible by as much as 20 to 30

percent. These high "coverage
rates" have led some members
of Congress to conclude that
some people who participate
are truly ineligible, and that
funding could be reduced
somewhat and still meet the
needs of truly eligible persons
who wish to participate. But
some advocates and state WIC
agencies believe that the
estimates of the number of
eligible persons are too low
and more people who are
eligible and want to participate
could do so. In response to
these concerns, the Food and
Nutrition Service (FNS) of the

USDA asked the Committee
on National Statistics of the
National Research Council to
convene a panel of experts to
review the methods used to
estimate the number of people
nationwide who are eligible
and likely to participate in the
WIC program. The panel's
charge is to review currently
used and alternative data and
methods for estimating
income eligibility, adjunctive
eligibility from participation in
other public assistance
programs, nutritional risk, and
participation if the program is
fully funded.

How WIC Helps National

Academies Press

Eat vegan—for less! Between low-paying jobs, car troubles, student loans, vet bills, and trying to pay down credit card debt, Toni Okamoto spent most of her early adult life living paycheck to paycheck. So when she became a vegan at age 20, she worried: How would she be able to afford that kind of lifestyle change? Then she discovered how to be plant-based on a budget. Through her popular website, Toni has taught hundreds of thousands of people how to eat a plant-strong diet while saving money in the process. With *Plant-Based on a Budget*, going vegan is not only an attainable goal, but the best choice for your health, the

planet—and your wallet. Toni's guidance doesn't just help you save money—it helps you save time, too. Every recipe in this book can be ready in around 30 minutes or less. Through her imaginative and incredibly customizable recipes, Toni empowers readers to make their own substitutions based on the ingredients they have on hand, reducing food waste in the process. Inside discover 100 of Toni's "frugal but delicious" recipes, including:

- 5-Ingredient Peanut Butter Bites
- Banana Zucchini Pancakes
- Sick Day Soup
- Lentils and Sweet Potato Bowl
- PB Ramen Stir Fry
- Tofu Veggie Gravy Bowl
- Jackfruit Carnita Tacos
- Depression Era Cupcakes
- Real Deal Chocolate Chip Cookies With

a foreword by Michael Greger, MD, *Plant-Based on a Budget* gives you everything you need to make plant-based eating easy, accessible, and most of all, affordable. Featured in the groundbreaking documentary *What the Health* Federal Energy Regulatory Commission Reports BenBella Books A study into why some states returned grant money from the Special Supplemental Nutrition Program for Women, Infants, and Children program fund. *Florida Maternal and Infant Health Out Comes by County* This book reviews the scientific basis for nutrition

risk criteria used to establish eligibility for participation in the U.S. Department of Agriculture's Special Supplemental Nutrition Program for Women, Infants, and Children (WIC). The volume also examines the specific segments of the WIC population at risk for each criterion, identifies gaps in the scientific knowledge base, formulates recommendations regarding appropriate criteria, and where applicable, recommends values for determining who is at risk for each criterion.

Recommendations for program action and research are made to strengthen the validity of nutrition risk criteria used in the WIC program.

Challenges, Changes and Choices

The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) began 40 years ago as a pilot program and has since grown to serve over 8 million pregnant women, and mothers of and their infants and young children. Today the program

serves more than a quarter of the pregnant women and half of the infants in the United States, at an annual cost of about \$6.2 billion. Through its contribution to the nutritional needs of pregnant, breastfeeding, and post-partum women; infants; and children under 5 years of age; this federally supported nutrition assistance program is integral to meeting national nutrition policy goals for a significant portion of the U.S. population. To assure the continued success of the WIC, Congress mandated that the

Food and Nutrition Service of the U.S. Department of Agriculture (USDA) reevaluate the program's food packages every 10 years. In 2014, the USDA asked the Institute of Medicine to undertake this reevaluation to ensure continued alignment with the goals of the Dietary Guidelines for Americans. In this third report, the committee provides its final analyses, recommendations, and the supporting rationale. Agriculture, Rural Development, Food and Drug Administration, and Related

Agencies Appropriations for 2007: Secretary of Agriculture The environmental justice movement, an organized social and political force in America in the '80s, is a global phenomenon today as activists worldwide try to understand the relationship between environment, race/ethnicity and social inequality. This volume examines domestic and international environmental issues. Second Followup Report Thirty fun, fast, healthy, kid-tested and approved recipes for the whole family! If you're looking for a collection of

delicious, nutritious recipes that kids will love, look no further than The Healthy KidsCookbook! In these bright pages with full-color photographs, you'll find thirty health-conscious recipes for a wide variety of delectable foods, and with fun names such as Porcupine Sliders, Smokin' Powerhouse Chili, and Squish Squash Lasagna, even picky eaters are sure to love this cookbook's meals. The recipes within serve six, include no more than fifteen commonly available ingredients, and are easy for families and home cooks to prepare. Even better, all of these

healthy meals are low in total fat, saturated fat, sugar, and sodium, and each one features foods that children and adults alike should eat more of, including nutrient-rich vegetables, beans and peas, and whole grains. They ' re perfect for growing kids, health-conscious families, and anyone who enjoys tasty food that ' s good for you! The Healthy Kids Cookbook features fun and kid-friendly recipes such as: Oodles of Noodles Tasty Tots Eagle Pizza Rainbow Rice Harvest Delight Stir-Fried Green Rice, Eggs, and Ham Confetti Soup And many more!
