The degrees of freedom of a moving point on the variety is the dimension of the variety. A one- dimensional variety is a curve and a two- dimensional variety is a surface. A three- dimensional variety may be called asolid. Most points of a variety are simple points. Singularities are special points, or
---	---	---

points of multiplicity greater than one. Points of multiplicity two are double points, points of multiplicity three are tripie points, and so on. A nodal point of a curve is a double point where the curve crosses itself, such as the alpha curve. A cusp is a double point where the curve has a beak. The vertex of a cone provides an example of a surface singularity. A reversible change of variables gives abirational transformation of a variety. Singularities of a variety may be resolved by birational transformations.

This book is the result of two decades of research work

which started with an accidental observation. One of my students, Dipl. phys. Volkmar Lenz, - ticed that the speckle pattern of laser light scattered by a cuvette containing diluted milk performed a strange motion every time he came near the cuvette with his thumb. After thinking about this effect we came to the conclusion that this motion can only be caused by scattering particles with different velocities, as in the case of the diffraction pattern of an optical grating: A linear motion of the grating does not change the pattern whereas a rotation of the grating does. The observed speckle motion could then be explained qualitatively as

produced by the inhomogeneous velocity of the convection within the cuvette which was produced by the heat of the thumb. The theoretical treatment of this effect revealed that the velocity gradient of the light scattering medium is responsible for the speckle motion. The idea to use this effect for developing measurement techniques for velocity gradients arose almost immediately. For that purpose we had to develop not only experimental set-ups to measure the pattern velocity but also the theory which describes the connection between this velocity and the velocity gradient. The result of this work together with the description of a

From former US Congressman and CIA Officer Will Hurd, a “ how-to guide with a prescription for getting the nation on the right footing ” (Politico) and “ a clarion call for a major political pivot ” (San Antonio Report) rooted in the timeless ideals of bipartisanship, inclusivity, and democratic values.

“ Hurd has the biography and the charisma and the God-given political chops to put the Republican Party—and the rest of the country—on notice. ” —THE ATLANTIC It ’ s

getting harder to get big things done in America. The gears of our democracy have been mucked up by political nonsense. To meet the era-defining challenges of the 21st century, our country needs a reboot. In American Reboot, Hurd, called “ the future of the GOP ” by Politico, provides a “ detailed blueprint ” (Robert M. Gates, Secretary of Defense, 2006 – 2011) for America grounded by what Hurd calls pragmatic idealism—a concept forged from enduring American values to achieve what is actually achievable. Hurd takes on five seismic problems facing a country in crisis: the Republican Party ’ s failure to present a principled vision for the future;

the lack of honest leadership in Washington, DC; income inequality that threatens the livelihood of millions of Americans; US economic and military dominance that is no longer guaranteed; and how technological change in the next thirty years will make the advancements of the last thirty years look trivial. Hurd has seen these challenges up close. A child of interracial parents in South Texas, Hurd survived the back alleys of dangerous places as a CIA officer. He carried that experience into three terms in Congress, where he was, for a time, the House ’ s only Black Republican, representing a seventy-one percent Latino swing district in Texas

---

that runs along 820 miles of the US-Mexico border. As a cyber security executive and innovation crusader, Hurd has worked with entrepreneurs on the cutting edge of technology to anticipate the shockwaves of the future. Hurd, who the Houston Chronicles calls “ a refreshing contract to the panderers, petty demagogues, and political provocateurs who reign these days, ” draws on his remarkable experience to present “ a call to Americans to consider the most contentious issues of our times more holistically ” (The Atlantic). He outlines how the Republican party can look like America by appealing to the middle, not the

edges. He maps out how leaders should inspire rather than fearmonger. He forges a domestic policy based on the idea that prosperity should be a product of empowering people, not the government. He articulates a foreign policy where our enemies fear us and our friends love us. And lastly, he charts a forceful path forward for America ’ s technological future. We all know we can do better. It ’ s time to hit “ ctrl alt del ” and start the American Reboot. Contributions Towards the Resolution of Conflict in Guyana SUNY Press Council on

Monochromatic radiation enables both very accurate structure determinations and studies of the dynamics of living and non-living matter. It is crucial for the realization of standards of time and length, for the determination of fundamental constants, and for many other aspects of basic research.

Bragg backscattering from perfect crystals is a tool for creating, manipulating, and analyzing x-rays with highest spectral purity. It has the unique feature of selecting x-rays with narrow spectral bandwidth. This book describes the theoretical foundations and principles of x-ray crystal optics with high spectral resolution. Various experimental studies and applications are presented and the author also addresses the development of

instrumentation, such as high-resolution x-ray monochromators, analyzers, wavelength meters, resonators, and interferometers. The book will be a valuable source of information for all students and researchers working in the field of x-ray optics.
