University of Georgia, Carl Vinson Institute of Government 737NG Training Syllabus is a highly detailed, full color book virtually crammed with original graphics and thousands of words of descriptive text that will provide a complete training syllabus for persons wishing to learn to operate the 737NG jet airliner. While intended specifically for the Flight Simulation market, even professional airline pilots will find the information useful and informative. This is a guide intended to teach "simmer" how to fly the jet the way "the Pros do". Learning to fly the 737NG like a real pilot is a challenging and exciting adventure awaiting computer-pilots. However, as the increasing complexity of the ADD-ON airplane models blurs the boundary between Professional flight training and flight simulation "games", the task seems

very difficult .. or even impossible. Captain Mike Ray's "737NG Training Syllabus" IS the document that will make this transition not only possible, but entertaining and ... well, a whole lot more simple. Written for the beginner as well as the veteran simmer, the profusely illustrated material is crammed with details, diagrams, explanations and useful information. The material starts slowly but builds to a crescendo. It includes a section for the "knows nothing" Ab-initio wannabe pilot and builds to provide information and operational procedures that will provide interesting and useful insight to even the professional airline pilot community. This beautiful and unique document provides the access toolset to the knowledge base that will allow the ordinary garden variety flight sim addict to cross the bridge between operating the current state of the art home based PC flight simulation programs and the real airline style simulator. This book is a MUST HAVE item for the 737NG computer pilot who wants to fly the incredibly accurate add-on airplanes as if they were real pilots. This paperback Black and White version of Captain Mike Ray's book on training to fly

the 737NG is a great bargain. You get all the same information that is in the pricier (but more beautiful) color version ... and the same graphic and text that makes the volume such a popular item for both professional airline pilots as well as Flight Simmers. So get a copy ... and learn to fly the 737NG like the pros do.

Looks at the operations of the International Space Station from the perspective of the Houston flight control team, under the leadership of NASA's flight directors, who authored the book. The book provides insight into the vast amount of time and energy that these teams devote to the development, planning and integration of a mission before it is executed. The passion and attention to detail of the flight control team members, who are always ready to step up when things do not go well, is a hallmark of NASA human spaceflight operations. With tremendous support from the ISS program office and engineering community, the flight control team has made the International Space Station and the programs before it a success.
