FUNDAMENTALS OF AIR TRAFFIC CONTROL International Edition is an authoritative book that provides readers with a good working knowledge of how and why the air traffic control system works. This book is appropriate for future air traffic controllers, as well as for pilots who need a better understanding of the air traffic control system. **FUNDAMENTALS OF AIR TRAFFIC CONTROL**, International Edition discusses the history of air

traffic control, emphasizing the logic that has guided its development. It also provides current, in-depth information on navigational systems, the air traffic control system structure, control tower procedures, radar separation, national airspace system operation and the FAA's restructured hiring procedures. This is the only college level book that gives readers a genuine understanding of the air traffic control system and does not simply require them to memorize lists of rules and regulations.

As chief test pilot for BAC in the 1960s, Brian Trubshaw was closely involved with the Anglo-French Concorde program and flew the supersonic aircraft on its maiden flight in 1969, remaining a key member of the test program after the aircraft entered airline service in 1967. This close association with Concorde affords him his unique position in offering the inside story of the aircraft, from the early days of its planning in the 1950s, through design and pre-flight testing, maiden flight and demonstrations, to certification and airline service. He also covers many other aspects of the program, from the cripplingly high development and construction costs to sales and post-delivery modification. The book reviews Concorde's 43-year service record with British Airways and Air France, along with the prospects for its continuation in airline service into the 21st century. The author also offers his views on the next generation of supersonic passenger transport aircraft.

In *At the Edge of Space*, Milton O. Thompson tells the dramatic story of one of the most successful research aircraft ever flown. The first full-length account of the X-15 program, the book profiles the twelve test pilots (Neil Armstrong, Joe Engle, Scott Crossfield, and the author among them) chosen for the program. Thompson has translated a highly technical

subject into readable accounts of each pilot's participation, including many heroic and humorous anecdotes and highlighting the pilots' careers after the program ended in 1968.

Trade Paperback + PDF eBook
"bundle" version: Trade paperback book comes with code to download the eBook from ASA's website. This comprehensive textbook explains the aerodynamics of helicopter flight as well as helicopter maneuvers, going beyond the strictly "how-to" type of aviation manual. Helicopter pilots need to thoroughly understand the consequences of their actions and base them upon sound technical knowledge; this textbook explains why the helicopter flies and even more importantly, why it sometimes does not. Beginning with aerodynamics, each step of the process is fully illustrated and thoroughly explained--from the physics of advanced operations to helicopter design and performance--providing helicopter pilots with a solid foundation upon which to base their in-flight decisions. Containing discussions on the NOTAR (no tail rotor) system, strakes, principles of airspeed and high-altitude operations, operations on sloping surfaces, and sling operations, this revised edition also included the latest procedures Federal Aviation Administration.

The astonishing untold story of the WWII airmen who risked it

all in the deadly race to become the greatest American fighter pilot. In 1942, America's deadliest fighter pilot, or "ace of aces" -- the legendary Eddie Rickenbacker -- offered a bottle of bourbon to the first U.S. fighter pilot to break his record of twenty-six enemy planes shot down. Seizing on the challenge to motivate his men, General George Kenney promoted what they would come to call the "race of aces" as a way of boosting the spirits of his war-weary command. What developed was a wild three-year sprint for fame and glory, and the chance to be called America's greatest fighter pilot. The story has never been told until now. Based on new research and full of revelations, John Bruning's brilliant, original book tells the story of how five American pilots contended for personal glory in the Pacific while leading Kenney's resurgent air force against the most formidable enemy America ever faced. The pilots -- Richard Bong, Tommy McGuire, Neel Kearby, Charles MacDonald and Gerald Johnson -- riveted the nation as they contended for Rickenbacker's crown. As their scores mounted, they transformed themselves from farm boys and aspiring dentists into artists of the modern dogfight. But as the race reached its climax, some of the pilots began to see how the spotlight warped their sense of duty. They emerged as leaders, beloved by their men as they chose selfless devotion over national accolades. Teeming with action all across the vast Pacific theater, *Race of Aces* is a fascinating exploration of the boundary between honorable duty, personal glory, and the complex landscape of the human heart. "Brings you into the cockpit of the lethal, fast-paced world of fighter pilots . . . Fascinating." -- Sara Vladic "Extraordinary . . . a must-read." -- US Navy Captain Dan Pedersen "A heart-pounding narrative of the courage, sacrifice, and tragedy of America's elite fighter pilots." -- James M. Scott "Vivid and gripping . . .

What if you could stop panic by tapping into a different part of your brain? After years of working to help sufferers of panic and anxiety, licensed therapist (and pilot) Tom Bunn discovered a highly effective solution that utilizes a part of the brain not affected by the stress hormones that bombard a person experiencing panic. This "unconscious procedural memory" can be programmed to control panic by preventing the release of stress hormones and activating the parasympathetic nervous system. This process, outlined in *Panic Free*, sounds complicated but is not, requiring just ten days and no drugs or doctors. Bunn includes specific instructions for dealing with common panic triggers, such as airplane travel, bridges, MRIs, and tunnels. Because panic is profoundly life-limiting, the program Bunn offers can be a real life-changer.
