Many readers undoubtedly have run crosscut saws in the past, and a lot of you know the difference between a good running saw and a poorly filed one. A poorly filed saw deserves the name I have often heard

attributed to it... “ misery whip. ” A well-filed saw, however, is efficient and can be satisfying to use. Only in recent years was a chain saw developed that could beat a topnotch buckler in a contest. There is a record of a 32-inch Douglas-fir log cut in 1 minute 262 / 5 seconds by one buckler. Saw filers of any quality are becoming very difficult—if not impossible—to find. This manual was written so those of you who use crosscut saws can maintain them yourselves and overcome some of the misery of that ol ’ whip. The manual provides a basic description of how and why a crosscut saw works, tips on building a saw vise, and some experience-tested methods as a guide for achieving a well-running saw. Only saws having raker teeth are discussed, because they are by far the most common saws found today. This includes lance, perforated-lance, and champion tooth patterns. Owning a coin operated Laundromat is a great business and can be very profitable. But, unless you have all new equipment, it can quickly nickel and dime you into making a loss and going out of business, losing your investment. I write this manual not as a business major or certified appliance person [and certainly not an English major]. I write it as an average 'Joe' who bought a laundromat and needs to run and maintain the business to make an honest

profit. The skills needed to run and maintain a laundromat are not rocket science and don't need expensive equipment: just common sense and logic. And for the macho guys out there, you will need to ask for help from time to time. I will assume you have no previous experience in repairing washers, dryers, change machines etc. I will get you started on a journey to taking charge of your equipment. You will get great satisfaction in making common repairs and keeping your equipment working and earning you money. The only experience I have is what I have learned from MY machines. I do not represent to provide repair procedures for all brands, ages and types of laundromat equipment, but I will teach you how I become familiar with my equipment, their personalities, their moods and limitations. I consider this a work in progress as every week I learn something new in my 'mat'. I do not have any problem paying for repair parts. That is the cost of doing business. What I want to avoid is the \$95 service call to trouble shoot a problem by my local appliance repair

company, then the part cost being doubled as their mark up and a second \$95 service call to install the newly inflated part. Even if you only make a one repair, you will save 10 times the cost of this book.
