Mobile is a powerful new tool for supporting organizational performance, including a wide-variety of learning opportunities including innovation, collaboration, research, and design. Mobile generates new products, services, and helps solve problems. Whether providing needed tools, augmenting learning, or connecting individuals, mobile devices are empowering individuals and organizations. Designing mLearning is a hands-on resource that presents step-by-step guidance for designing, delivering, and deploying mobile solutions, covering both the background model and pragmatic considerations for successfully navigating mobile projects. The book takes an integrated approach to mobile learning regardless of the device used. Written by Dr. Clark Quinn, a noted leader in the mLearning revolution, Designing mLearning debunks commonly held myths about mLearning, defines the myriad opportunities for mobile, contains real-world, illustrative examples, includes implementation concerns, and places mobile learning in an overall strategic plan. Designing mLearning is written for instructional designers, developers, media experts, managers, and anyone with responsibility for supporting performance in organizations. While the focus is on the design of solutions, the book addresses the critical organizational issues to assist the larger agenda of mobilizing the organization. The information outlined in this groundbreaking guide can be applied across the mobile device spectrum and provides a systematic and integrated suite of conceptual frameworks to guide designers to pragmatic and effective solutions. "Quinn takes you by the hand and leads you carefully and comprehensively through the m-learning maze of devices, models, examples, and designs, at the same time demonstrating that mobile learning is more than being about learning, but is also about performance." --Jane Hart, founder & CEO, Centre for Learning and Performance Technologies "Stop thinking mLearning is miniaturized eLearning. Just as digital video has enabled entirely new forms of entertainment and communication, mLearning enables powerful new (and old) performance solutions at very low costs. Clark omits the deafening hyperbole and delivers today's best source of clear, complete, and useful mLearning guidance for us all." --Michael Allen, CEO, Allen Interactions "The future is mobile. It will rock you more than the web did. And Clark Quinn has written the missing manual." --Jay Cross, CEO, Internet Time, and author, Informal Learning "Those of us in learning and development know we spend a disproportionate amount of time on formal training, missing opportunities to support workers where real learning occurs: in work, every day. With a wealth of examples, Clark Quinn provides a clear, useful guidebook for using 21st-century tools to support our performers as they enact their work and apply new learning." --Jane Bozarth, Ed.D., author, Social Media for Trainers and Better Than Bullet Points "Yes, this is a handy book about mobile learning and support. But it's also a thoughtful nudge towards rethinking what we mean when we say we are educators." --Allison Rossett, San Diego State University "Clark Quinn sets the pace for a swift race toward mobile everything. His thought-leadership and focus on solutions that work make him the one to watch, to read, and to learn from now!" --Marcia Conner, advisor in business culture and collaboration, co-author of The New Social Learning: A Guide to Transforming Organization Through Social Media

Written by twenty-five authors from academia, pharmaceutical industry and Pharmacopeias worldwide, this monograph covers the fundamentals and applications of Quality by Design (QbD) and Analytical Quality by Design (AQbD) in a practical and didactic manner. The book starts by describing the motivation and the urgent need for the implementation of the QbD framework in pharmaceutical development, along with the definition of its major elements: Quality Target Product Profile (QTTP), Critical Quality Attributes (CQAs), Critical Process Parameters (CPPs), Critical Material Attributes (CMAs) and the importance of using multivariate methods of Design of Experiments (DOE). The concept of life cycle and regulatory perspectives are discussed. Three chapters are entirely dedicated to DOE theory from screening to optimization designs. Moreover, a comprehensive discussion on modelling and data treatment is presented. Practical aspects of QbD and DOE for pharmaceutical product and process of different dosage forms is included, as well as a practical guide of the input process variables, material attributes, intermediate, and

final quality attributes for the most representative pharmaceutical processes. Analytical Quality by Design (AQbD) is also deeply explored, including risk analysis, definitions of Analytical Target Profile (ATP), Method Operable Design Region (MODR) and the life cycle approach, taking into account the compendial and regulatory perspectives. A detailed example of a new chromatographic method for the quality control of a pharmaceutical topical product based on the AQbD procedure is shown. Finally, advanced statistical approaches and DOE methods for extraction studies of bioactive compounds are also presented. The vast amount of information offered in this book provides a comprehensive perspective on QbD, AQbD and DOE principles, essential tools for modern pharmaceutical and analytical development. This work is an examination of all aspects of the science in developing effective dosage form for drug delivery  
Pharmaceutics refers to the subfield of pharmaceutical sciences that develops drug delivery products or devices to optimize the drug's performance once administered. This multidisciplinary field draws on physical chemistry, organic chemistry, and biophysics to generate and refine these crucial elements of medical care. Moreover, incorporating such disparate dimensions of drug product design as material properties and legal regulation bridges the gap between effective chemicals and viable medical treatments. Integrated Pharmaceutics provides a comprehensive introduction to the creation and manufacture of effective dosage forms for drug delivery. It presents its subject following the principles of physical pharmacy, product design, and drug regulations. This tripartite structure allows readers to move from theory to practice, beginning from a firm foundation of physical pharmacy principles, including drug solubility and stability estimation, rheology, and interfacial properties. From there, it proceeds to discussions of drug product design and of harmonizing pharmaceutical design with the regulatory regimens and technological standards of the United States, European Union, and Japan. Readers of the second edition of Integrated Pharmaceutics will also find: A glossary defining key terms, extensive informative appendices, and a list of references leading to the primary literature in the field for each chapter Earlier chapters are expanded, with additional new chapters including one entitled “ Biotechnology Products ” Supplementary instructor guide with questions and solutions available online for registered professors Updated regulatory guidelines including quality by design, design space analysis, process analytical technology, polymorphism characterization, blend sample uniformity, and stability protocols Integrated Pharmaceutics is a useful textbook for graduate students in pharmaceutical sciences, drug formulation and design, and biomedical engineering.
