When Entrepreneurs Meet: The Collective Governance of New Ideas challenges our understanding of how entrepreneurs crystallize opportunities surrounding new technologies. While innovation is the fundamental driver of growth and prosperity, how the earliest stages of entrepreneurship are governed remains elusive. This book creates a new, institutional approach to understanding entrepreneurship before emphasizing how entrepreneurs create governance structures to coordinate new knowledge resources. Rather than the conventional view that entrepreneurship happens inside firms, this unique transaction-cost economics analysis of entrepreneurship suggests it might begin earlier in hybrid, polycentric self-governance structures, including the innovation commons. Allen explores and analyses various examples of these structures, including hackerspaces and the institutions coalescing around the development of the blockchain economy, along with the dynamics of how those institutions might collapse into firms. This new understanding of the entrepreneurial governance problem is also connected to contemporary questions about the purpose, scope, and application of innovation policy.

Innovating Construction Law: Towards the Digital Age takes a speculative look at current and emerging technologies and examines how legal practice in the construction industry can best engage with the landscape they represent. The book builds the case for a legal approach based on transparency, traceability and collaboration in order to seize the opportunities presented by technologies such as smart contracts, blockchain, artificial intelligence, big data and building information modelling. The benefits these initiatives bring to the construction sector have the potential to provide economic, societal and environmental benefits as well as reducing the incidence of disputes. The author uses a mixture of black letter law and socio-legal commentary to facilitate the discourse around procurement, law and technology. The sections of the book cover the AS IS position, the TO BE future position as predicted and the STEPS INBETWEEN, which can enable a real change in the industry. The rationale for this approach lies in ensuring that the developments are congruent with the existing frameworks provided by the law. The book proposes various steps that the industry should seriously consider taking from the current position to shape the future of the sector and ultimately create a better, more productive and sustainable construction industry. This book is a readable and engaging guide for students and practitioners looking to learn more about construction law and its relationship with technology and for those seeking a platform for graduate studies in this area.

This book analyses large-scale land investments for agricultural purposes in Africa ' s least developed countries from a law and economics perspective. Focusing on the effects of foreign land investments on host countries ' local populations and the apparent failure of international law to create incentives to offset them, it also examines the legal and economic mechanisms to hold investors accountable in cases where their investment leads to human rights violations. Applying principal agent and contract theory, it elucidates the sources of opportunism and develops control mechanisms to ameliorate the negative effects. It shows that although judicial mechanisms fail to deliver justice, international law offers alternatives to safeguard against arbitrary and abusive state and investor conduct, and also to effectuate human rights and, thus, tackle opportunistic behaviour.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways

---

to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
