Server adalah sebuah sistem komputer yang menyediakan jenis layanan tertentu dalam sebuah jaringan komputer. Server didukung dengan processor yang bersifat scalable dan RAM yang besar, juga dilengkapi dengan sistem operasi khusus yang disebut sebagai sistem operasi jaringan atau

network operating system. Windows Server adalah versi Windows yang khusus digunakan untuk server / datacenter dan biasanya digunakan sebagai server networking perusahaan, berbagai layanan berbasis cloud atau sebagai server websites / web apps. Banyak orang tahu apa itu Windows Server karena bukanlah nama Operating System yang baru, namun sebenarnya tidak banyak yang tahu apa penggunaannya dan penerapan pada server di perusahaan serta bagaimana implementasinya. Windows Server 2012 merupakan sistem operasi terbaru yang dirilis oleh Microsoft setelah Windows Server 2008 dan Windows Server 2012. Seperti halnya Windows Server 2008 R2, windows server 2012 hanya diproduksi dalam arsitektur 64-bit. Kelebihan Windows Server 2012 dengan Windows Server versi sebelumnya adalah anda dapat berpindah / switching dari Server Core ke GUI dan sebaliknya, dimana pada Windows Server versi sebelumnya anda harus menginstall ulang server jika ingin melakukan hal tersebut. Banyak perusahaan memiliki License Windows Server, namun tidak semua dari mereka ini yang menggunakan Active Directory / Domain Controller Server untuk implementasi Centralize User Management & Centralize Resource Network.
