In recent years, billions of dollars (and euros, yen, and other currencies) have been spent by wireless services providers to acquire the radio frequency spectrum needed to offer so-called "Third Generation" (3G) mobile services. These services include high-speed data, mobile Internet access and entertainment such as games, music and video programs. Indeed, as voice communications are substituted by data communications, software -rather than terminals or networks- has become the driver of the wireless industry. Meanwhile, services are becoming increasingly specialized. Why has the road to multimedia cellular been so difficult? These benefits of the mobile Internet have come with the costs of a massive transition that has coincided with the bust of stock markets and the technology segments worldwide, controversial and costly license auctions in several lead markets, dated or mistaken regulatory policies, the clash between the early hype and the pioneering realities of the mobile Internet. But these are generalities that barely scratch the surface. The devil is in the details. And it is these details that Competition for the Mobile Internet addresses.

Bringing together media studies and environmental humanities, the contributors to Saturation develop

saturation as a heuristic to analyze phenomena in which the elements involved are difficult or impossible to separate. In ordinary language, saturation describes the condition of being thoroughly soaked, while in chemistry it is the threshold at which something can be maximally dissolved or absorbed in a solution. Contributors to this collection expand notions of saturation beyond water to consider saturation in sound, infrastructure, media, Big Data, capitalism, and visual culture.

Essays include analyses of the thresholds of HIV detectability in bloodwork, militarism's saturation of oceans, and the deleterious effects of the saturation of cellphone and wi-fi signals into the human body. By channeling saturation to explore the relationship between media, the environment, technology, capital, and the legacies of settler colonialism, Saturation illuminates how elements, the natural world, and anthropogenic infrastructures, politics, and processes exist in and through each other.

This casebook raises interesting and challenging problems concerning the development of property law. Property concepts are introduced through cutting edge issues, such as intellectual property, rights of publicity, and ownership rights in the human body. Historical dimensions are presented through discussions of laws which formerly excluded certain individuals from most forms of ownership and property control, such as Native Americans, African Americans, and women. The text covers traditional topics: estates in land, landlord and tenant laws, transfers of property, private land use controls, and constitutional limitations on public land use controls. Most chapters are preceded by a concise summary of legal doctrines or common themes covered in the chapter. Explanatory Notes provide extensive explanations of cases and rules; they clarify complicated opinions with background information regarding the circumstances giving rise to the proceedings. Problems and Problem Notes take students beyond the realm of settled rules to generate analysis of the purpose behind the rules. This book also points students to relevant secondary sources for a broader understanding of property law. This eBook features links to Lexis Advance for further legal research options.
