Ronald M. North President Universities Council on Water Resources People
sense intuitively that the world in which we live is not free of risk. Every
decision, every action, even the refusal to either act or decide involves some
element of risk. Perhaps, because we accept relatively low levels of risk in our
daily activi ties, we tend to minimize the existence of risk and thereby fail to
include risk assessment in those decisions and actions which could be
improved through a risk assessment process. However, our casual approach
to risk assessment seems to stem largely from the diffi culties inherent in
measuring risk rather than from any lack of cognizance of the existence of
risk. This conclusion is evidenced by the many statements in official
documents relating to planning and evaluation which suggest that risk
assessments should be con ducted but do not provide the mechanism for such
assessments nor do they encourage their consideration in the decision making
process. This conference on Risk/Benefit Analysis in Water Resources
Planning and Management is notable because it attempts to identify and
evaluate the mechanisms available for risk assessment which might be useful
in water resources planning and management efforts. These proceedings
bring together the thoughts of professional per sons who have struggled with
the problems of risk assessment and who have contributed to the refinement
of both theoretical and pragmatic solutions for the improvement of risk
assessment processes.
