Speaker Wire: How to Choose the Right Gauge and Type

As you might have already observed there are two colors of wires emerging from the standard factory speaker. The black wire is usually the negative wire and should be attached to the negative terminal on the speaker. The solid or white striped wire is the positive and should be attached on the positive terminal on the speaker.

How to Wire a Car Stereo: 15 Steps (with Pictures) - wikiHow

Thick wire (12 or 14 gauge) is recommended for long wire runs, high power applications, and low-impedance speakers (4 or 6 ohms). For relatively short runs (less than 50 feet) to 8 ohm speakers, 16 gauge wire will usually do just fine. It ' s cost-effective and easy to work with. Ask your advisor to recommend the proper gauge for your installation.

In-wall Wiring Guide for Home A/V - Crutchfield

Connect the remaining wires. Plug in the antenna cable and connect the stereo's wiring adapter to the the car's wire harness. Connect the output converter if one is needed to make the new stereo compatible with the car's audio system. Have in mind that all wires should be connected in the end and there should no single one hanging unattended.

Usually, 18 gauge wire is sufficient, except for high power

(subwoofer) applications. Different wires will have different line capacitances, which can cause the wire to act as a low pass filter. This is one of the selling points of high end cables. You may be tempted to use typical electrical wire instead of speaker wire to save money.

Image of the rear of a home stereo receiver/amplifier. The recommended speaker impedance ratings are usually listed above the speaker wire posts.

A home stereo, for example, may often list 6-16 ohms as being ok for use.

Also, attempting to wire two 8 ohm speakers in parallel to an 8 ohm stereo would have the same effect.

The easiest way to wire in an aftermarket car stereo is to look at car stereo wiring diagrams for the specific vehicle and head unit, but it's actually possible to get the job done without any labels, adapters, or diagrams.

Car Stereo Wiring Color and Identification Basics

The first power you'll want to check for is the constant 12V wire, so set your multimeter to the appropriate scale, connect the ground lead to a known good ground, and touch the other lead to each wire in the speaker wire. When you find one that shows approximately 12V, you have found the constant 12V wire, which is also referred to as the memory wire.
