This Research Topic is the second edition of *Fluency and reading comprehension in typical readers and dyslexics readers: Volume I*. This Second Edition Research Topic is focused on the characterization of the reading-writing difficulties and their comorbidities and in the analysis of evidence-based recommendations for early interventions and treatment of these difficulties within the fields of neuropsychology, speech-language pathology, and educational psychology. Reading involves decoding and comprehension components, and to become efficient it requires a large number of cognitive and linguistic processes. Among those, decoding failures can have different origins, such as deficits in phonological and/or visual processing. In addition, a child with reading difficulties might also have problems in the acquisition of writing and handwriting performance. This is an important point to be discussed, as reading and writing both suffer

interference from vocabulary acquisition, linguistic skills, memory skills, reading and writing practices, and literacy methods. These processes become important only when the professional needs to deal with students presenting learning difficulties.

Difficulty in using the knowledge of conversion rules between grapheme-phoneme to word reading construction or phoneme-grapheme for writing can be identified in schoolchildren with dyslexia, dysgraphia, and dysortography, being a specific learning disorder with a neurological etiology. In addition, there is established evidence of a speech-language processing basis, students with specific learning disabilities can show a range of cognitive difficulties (e.g., rapid naming, executive functioning, working memory). These presented difficulties interfere in their learning process, impairing their learning development.

The book opens with a discussion of language assessment in relation to debates about the nature of literacy; it concludes with a discussion of policy implications, which is grounded in literacy theory as well as in practical constraints such as available human and material resources.
