Governments across the globe have begun evolving from lumbering bureaucracies into smaller, more agile special jurisdictions - common-interest developments, special economic zones, and proprietary cites. Private providers increasingly deliver services that political authorities formerly monopolized, inspiring greater competition and efficiency, to the satisfaction of citizens-qua-consumers. These trends suggest that new networks of special jurisdictions will soon surpass nation states in the same way that networked computers replaced mainframes. In this groundbreaking work, Tom W. Bell describes the quiet revolution transforming governments from the bottom up, inside-out, worldwide, and how it will fulfill its potential to bring more freedom, peace, and prosperity to people everywhere.

This volume continues the detailed examination of the British Library Kharosthi scrolls--extremely fragile and brittle fragments of manuscript on birch-bark rolls. Although their provenance is uncertain, there are strong indications that they came from Hadda in eastern Afghanistan and were most likely written in the early first century A.D. during the reign of the Saka rulers, making them the oldest known Buddhist manuscripts. Fragments 16 and 25 are two long, relatively narrow fragments that obviously belong to the same scroll. Two texts were written on the scroll, each by a different scribe. The first text, referred to as the Gandhari London Dharmapada, represents an anthology of verses well known in the Buddhist tradition. The second text is a series of stories concerning previous births of the Buddha and of some of his disciples. This open access book explores cutting-edge solutions and best practices for big data and data-driven AI applications for the data-driven economy. It provides the reader with a basis for understanding how technical issues can be overcome to offer real-world solutions to major industrial areas. The book starts with an introductory chapter that provides an overview of the book by positioning the following chapters in terms of their contributions to technology frameworks which are key

elements of the Big Data Value Public-Private Partnership and the upcoming Partnership on AI, Data and Robotics. The remainder of the book is then arranged in two parts. The first part "Technologies and Methods" contains horizontal contributions of technologies and methods that enable data value chains to be applied in any sector. The second part "Processes and Applications" details experience reports and lessons from using big data and data-driven approaches in processes and applications. Its chapters are co-authored with industry experts and cover domains including health, law, finance, retail, manufacturing, mobility, and smart cities. Contributions emanate from the Big Data Value Public-Private Partnership and the Big Data Value Association, which have acted as the European data community's nucleus to bring together businesses with leading researchers to harness the value of data to benefit society, business, science, and industry. The book is of interest to two primary audiences, first, undergraduate and postgraduate students and researchers in various fields, including big data, data science, data engineering, and machine learning and AI. Second, practitioners and industry experts engaged in data-driven systems, software design and deployment projects who are interested in employing these advanced methods to address real-world problems.

This book provides an in-depth study of controlled languages used in technical documents from both a theoretical and practical perspective. It first explores the history of controlled languages employed by the manufacturing industry to shape and constrain the information in technical documents. The author then offers a comparative analysis of existing controlled languages and distills the best-practice features of those language systems. He concludes by offering innovative models that can be used to develop and trial a new controlled language. This book will be of interest to linguists working in technical and professional communication, as well as writers and practitioners involved in the production of technical documents for companies in multiple industries and geographical locations.
