Going beyond the message of Lean In and The Confidence Code, Gannett's Chief Content Officer contends that to achieve parity in the office, women don't have to change—men do—and in this inclusive and realistic handbook offers solutions to help professionals solve gender gap issues and achieve parity at work. Companies with more women in senior leadership perform better by virtually every financial measure, and women employees help boost creativity and can temper risky behavior—such as the financial gambles behind the 2008 economic collapse. Yet in the United States, ninety-five percent of Fortune 500 chief executives are men, and women hold only seventeen percent of seats on corporate boards. More men are reaching across the gender divide, genuinely trying to reinvent the culture and transform the way we work together. Despite these good intentions, fumbles, missteps, frustration, and misunderstanding continue to inflict real and lasting damage on women's careers. What can the Enron scandal teach us about the way men and women communicate professionally? How does brain circuitry help explain men's fear of women's emotions at work? Why did Kimberly Clark blindly have an all-male team of executives in charge of their Kotex tampon line? In *That's What She Said*, veteran media executive Joanne Lipman raises these intriguing questions and more to find workable solutions that individual managers, organizations, and policy makers can employ to make work more equitable and rewarding for all professionals. Filled with illuminating anecdotes, data from the most recent relevant studies, and stories from Lipman's own journey to the top of a male-dominated industry, *That's What She Said* is a book about success that persuasively shows why empowering women as true equals is an essential goal for us all—and offers a roadmap for getting there.

Essence of Care was first introduced in 2001, designed to support and address the fundamentals of care. Essence of Care 2010 is a tool to help healthcare professionals take a patient-focused and structured approach to sharing and comparing practice, which is at the heart of the 12 revised benchmarks contained in the publication. The updated Essence of Care 2010 supports and reflects a number of the themes in "Equity and excellence: liberating the NHS" (Cm. 7881, ISBN 9780101788120) and provides a suite of benchmarks to drive forward best practice in delivering the fundamentals of care and improving the experiences of people who use the services. Essence of care is essential for all front line staff in health and social care settings. This title is a complete set of all 12 benchmarks along with "How to use Essence of care 2010", which includes a description of the benchmarking tool and explains how to use the 12 benchmarks. The benchmarks and "How to use" are all available separately

Hardbound. Until this century, there was no scientific method for developing and testing agents for the treatment of epilepsy. Physicians would often, from analogy to other conditions, try remedies which appeared to affect systems thought to be important in the onset of seizures. The many developments and treatment concepts in epilepsy research in the last half-century have culminated in the short reign of popularity of monotherapy. Monotherapy is now being challenged by rational polypharmacy, based on the theory that two or more antiepileptic agents with different mechanisms of action may be more beneficial. This volume addresses areas in which monotherapy may be made more rational, and proposes that rational polypharmacy is the natural extension of rational monotherapy. Numerous issues are explored which need further delineation with a goal of a comprehensive antiepileptic drug management program to be developed for each patient.

This book, first appearing in German in 2004 under the title *Spezielle Relativitätstheorie für Studienanfänger*, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike. Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions. The main purpose of this book is to provide a concise introduction to the methods and philosophy of constructing nonstandard finite difference schemes and illustrate how such techniques can be applied to several important problems. Chapter 1 gives an overview of the subject and summarizes previous work. Chapters 2 and 3 consider in detail the construction and numerical implementation of schemes for physical problems involving convection-diffusion-reaction equations, that arise in groundwater pollution and scattering of electromagnetic waves using Maxwell's equations. Chapter 4 examines certain mathematical issues related to the nonstandard discretization of competitive and cooperative models for ecology. The application chapters illustrate well the power of nonstandard methods. In particular, for the same accuracy as obtained by standard techniques, larger step sizes can be used. This volume will satisfy the needs of scientists, engineers, and mathematicians who wish to know how to construct nonstandard schemes and see how these are applied to obtain numerical solutions of the differential equations which arise in the study of nonlinear dynamical systems modeling important physical phenomena.

Pain in later life is both quite common and disabling, and it differs significantly in terms of its aetiology, diagnosis and treatment from pain in the general adult population. Older people often have complicated co-morbidities, have a high prevalence of mental health problems (e.g., anxiety, cognitive impairment, and depression) and respond to treatment in different ways compared to younger people. Their specific needs are rarely discussed specifically in more general texts. Part of the "Oxford Pain Management Library," this pocketbook will serve as a concise companion for healthcare professionals who manage older patients suffering with pain. Concise chapters will summarise up-to-date research literature in a practical style that will have direct relevance to busy clinicians. Introductory chapters will include the epidemiology of pain in older people as well as the proper assessment of older patients with pain conditions. Later chapters will focus on specific painful conditions common in the elderly, including arthritis and rheumatism, osteoporosis, abdominal pain, and cancer. The book will appeal to a wide variety of health care professionals in both primary care and secondary care services such as geriatric medicine, rheumatology, orthopaedics, surgery, pain management and palliative medicine. The book will also be of relevance to nurses, physiotherapists, occupational therapists, clinical psychologists, pharmacists and other health care providers.
