If you want to learn how to study effectively, improve your grades, and become a better student, then check out HowExpert Guide to Study Skills. Students are under more pressure than ever to perform well in the classroom, write flawless papers, and excel during testing. Sadly, many students struggle in school because they do not know how to succeed in the academic environment. This book seeks to give students the tools they need to succeed. Written by an experienced tutor, this book examines 101 lessons every student needs to be successful. Academic success is not just about taking the right classes; it’s also about using the right skills and structures to organize and streamline your learning process. This book examines every aspect of student life, taking you from the beginning of the class through your final special projects. Students are encouraged to get a planner and are taught how to use it to increase their productivity and success significantly. They are also taught how to take an active part in their education with lessons on the T-zone in classrooms and on nine study skills proven effective through experience. Readers are then taught how to write and speak effectively by managing their information and organizational structures, and they learn key test-taking strategies and tips for managing test anxiety. This book delves into the specifics that every student needs to succeed in their academic ventures, giving them the tools and the support they need to be truly successful. Check out HowExpert Guide to Study Skills now! About the Expert Sarah Fantinel has been a tutor of all ages for five years. She enjoys helping students discover their academic potential and has helped many students improve their grades and pass various standardized tests, including the ACT and the teacher test. Sarah first started tutoring in college because she wanted to help her peers be successful, and tutoring has allowed her to celebrate the little victories of life with her students. Holding degrees in both English and Humanities, Sarah currently lives in Arkansas with her dog and sixteen-year-old cat. When she is not writing or tutoring students, Sarah likes to take walks and explore new burger restaurants.

HowExpert publishes quick ‘how to’ guides on all topics from A to Z by everyday experts.

4th Revised Edition of JAPANESE FOR BUSY PEOPLE, the most popular Japanese language textbook series in the world. Since it was first published in 1984, the focus of the Japanese for Busy People series has always been to teach Japanese for effective communication. Japanese for Busy People I: The Workbook for the Revised 4th Edition is for all learners who wish to improve their speaking and listening skills. It can be used in tandem with Japanese for Busy People I: Revised 4th Edition, both Kana Edition and Romanized Edition, or as independent study material. The workbook provides ample speaking and listening practice in the form of illustrated exercises that call on learners to construct dialogues and role-play in Japanese. Illustrations combined with conversations, which proceed at a natural pace in the audio recordings, help learners to feel as if they are actually experiencing each situation. Through repeated oral and listening practice, learners will come to acquire the rhythm of real-life Japanese conversation. Audio recordings can be downloaded for free from kodansha.us.

Japanese for Busy People Book 2: The Workbook Prentice Hall

An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. “Written by three experts in the field, Deep Learning is the only comprehensive book on the subject.” –Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

Printed in color. U.S. History is designed to meet the scope and sequence requirements of most introductory courses. The text provides a balanced approach to U.S. history, considering the people, events, and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience). U.S. History covers key forces that form the American experience, with particular attention to issues of race, class, and gender.

Joseph Giacomini takes us on a short visual journey into the world of perception enhancement. The term expresses that multiplicity of new technologies acting to augment human sensory abilities, permitting us to see, hear and feel the world through technological eyes, ears and hands. Enhancing human perception is not new, even the Greeks and the Romans regularly used their magnifying lenses, but humanity has never had at its fingertips, literally, the range of sensor, signal processing and cognitive technologies flooding the market today. Can we see in the dark? Can we see through walls? Can we see heat? Of course we can. This is the 21st century! As we embark on this short picture tour of what our world looks like through artificial eyes, emotional and thought-provoking images of the well known and of the rare provide a brief glimpse into what the world around us looks like when we are willing to transcend our usual perceptual abilities. This visual diary will be an inspiration for future artists, designers and scientists.
