Workforce Wake-Up Call Brookings Institution Press Tested, practical ideas to meet current and future skilling needs of both workers and employers The labor market in the United States faces seemingly contradictory challenges: Many employers have trouble finding qualified applicants for current and future jobs, while millions of Americans are out of work or are underemployed—their paths to living-wage jobs blocked by systemic barriers or lack of adequate skills. Growing Fairly offers workforce development reforms that meet the needs of both workers and employers. Based on the experiences of hundreds of leaders and workers, the authors set out ten principles for designing a more effective and equitable system that helps workers obtain the skills necessary for economic mobility. The principles outlined in the book argue for a more comprehensive view of the skilling needs of current and prospective workers. They spell out the attributes of effective programs and make the case for skill-based hiring, widely distributed performance data, and collaboration. The book emphasizes the importance of local action to overcome the structural barriers that challenge even the most determined would-be learners. Growing Fairly shows cross sector leaders how to work across organizational boundaries to change the trajectory of individuals struggling to make a living wage. This is not a

book of untested theories. Instead, it is written by practitioners for practitioners. Much of it is told through the voices of those who run programs and people who have taken advantage of them. While the issues the book addresses are profound, its take on the subject is optimistic. Between them, the authors have spent decades searching out and supporting effective practices. Even more critically, they have learned how to knit competing agencies and organizations into cohesive systems with coordinated missions. Their practical ideas will benefit a wide range of readers, from practitioners in the field to students and scholars of the American labor system.

A roadmap for how we can rebuild America's working class by

transforming workforce education and training. The American dream promised that if you worked hard, you could move up, with well-paying working-class jobs providing a gateway to an ever-growing middle class. Today, however, we have increasing inequality, not economic convergence. Technological advances are putting quality jobs out of reach for workers who lack the proper skills and training. In *Workforce Education*, William Bonvillian and Sanjay Sarma offer a roadmap for rebuilding America's working class. They argue that we need to train more workers more quickly, and they describe innovative methods of workforce education that are being developed across the country.

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. *Retooling for an Aging America* calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use *Retooling for an Aging America* to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs. *How the Government Measures Unemployment* National Academies Press
Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. *Improving the Quality of Long-Term Care* takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety

of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

Investing in a Skilled Workforce National Academies Press

Unprecedented shifts in the age distribution and

diversity of the global labor pool are underway. Within the decade, as the massive boomer generation begins to retire and fewer skilled workers are available to replace them, companies in industrialized markets will face a labor shortage and brain drain of dramatic proportions. Ken Dychtwald, Tamara Erickson, and Robert Morison argue that companies ignore these shifts at great peril. Survival will depend on redefining retirement and transforming management and human resource practices to attract, accommodate, and retain workers of all ages and backgrounds. Based on decades of groundbreaking research and study, the authors present innovative and actionable management techniques for leveraging the knowledge of mature workers, reengaging disillusioned midcareer workers, and attracting and retaining talented younger workers. This timely book will help organizations sustain their competitive edge in tomorrow’s inevitably tighter labor markets.
