The need to contain costs across the business is as strong as ever and the search for cost reduction opportunities is intensifying. There still remains one last major opportunity to take out costs - through the supply chain.

Ultimately all costs will make their way to the final marketplace to be reflected in the price paid by the end user. Smart companies instead seek to make the supply chain more competitive through the value it creates and the costs it reduces overall. They have realised that the real competition is not company against company but rather supply chain against supply chain. **Supply Chain Management Accounting** looks at how the evolution of supply

chains has been dramatic over the last few years, with more and more companies moving to sourcing overseas, distributing finished goods to overseas markets, and increasing their international operations. The seeking of low-cost country sourcing, optimizing manufacturing, and exporting products and services has created new challenges to demand forecasting and supply chain planning. **Supply Chain Management Accounting** presents a wide range of approaches and groundbreaking research findings. The book covers profitability, liquidity and asset utilisation, product costing, activity-based costing, investment appraisal, customer profitability analysis, budgeting and sales and operations planning. Online supporting resources include invaluable study questions and worked solutions to reinforce the learning as well as multiple-choice questions with solutions and PowerPoint activities.

The purpose of this paper is to provide evidence on how working capital is allocated and varies in a network. Cross-sectional network data were collected by a snowball sampling in Bloomberg's database. For the involved companies, financial data were collected for the period 2009-2017. The analysis of working capital allocation was conducted on groups with different relationship strength. For the analysis of working capital variability different credit rating groups were formed. Each analysis was run on three different ways of allocating companies to value chain tier. The profile of the value chain tier appears to have an effect on the cash conversion cycle (CCC). Overall, firms positioned upstream are likely to have higher CCC and higher CCC variability. This suggests the

existence of a mechanism that transmits working capital burden from customers to suppliers along the value chain. The results show that this trend is "reset" in the midstream section. Highly liquid companies with access to outside finance provide liquidity to the supply chain and stop the dynamics. A similar effect could be achieved by supply chain finance solutions. Inter-firm collaboration may reduce the cascading effect and stabilize the value chain. The originality of this paper lies in the appliance of social network analysis in the working capital context. The results also highlight that a more holistic perspective on working capital management would be more suitable than firm-centric approaches. The results are based on snowball sampling with a limited amount of alters, waves and seeds implying very limited generalizability. Further, while a panel data set was used for company attributes, the network data was cross-sectional. **Business America** CFA Institute

The book "Supply Chain Finance Solutions" offers orientation in the new discipline of Supply Chain Finance (SCF) by investigating the need for and nature of SCF, along with its characteristics and enablers. Due to the novelty of the Supply Chain Finance approach, there are still many knowledge gaps. This lack of research leads to uncertainties about the successful implementation of SCF solutions within companies as there is little quantified evidence on the achievable cost savings and other potential benefits. The authors close this gap by providing the latest information on business concepts and the SCF market. Based on a sample SCF model, the worldwide market size for such solutions and potential cost savings to companies engaged in SCF are analyzed. The work underlines the generally agreed-upon attractiveness and future relevance of SCF solutions by creating win-win situations; for all

actors in the end-to-end supply chain as well as for external service providers.
