Topics discussed in this book are deliberately comparative and show the different levels of the ground rules for the regulation of corporate operations in the different jurisdictions. The United Kingdom, Nigeria and South Africa are primarily chosen simply on the common law background upon which the statutory provisions in those countries are founded. There are also references to Canada, Australia and India on case by case basis to illustrate the differences in the application of the relevant legal principles and statutory interpretations. The insights gained should facilitate statutory amendments and effective adjustment in the operations of the regulatory agencies and business organizations. The book is written as an invaluable study material for students at the tertiary level. Illuminating the concepts from divergent perspectives avails the reader a broad range of explanations for a better understanding of the subject. Legal practitioners and the judiciary should also find in this work a good source of legal information on company law, especially whenever the need arises to seek persuasive guidance from the opinions of courts and writers on similar developments in cognate jurisdictions to give meaning to those difficult and uncharted courses in the discharge of their daily responsibilities of interpreting and applying the law as judicial officers. The book should be a handy material for those running the affairs of a company in understanding the rules of their engagement.

Fad-Free Strategy provides a ground-breaking approach to making

better business strategy decisions: more efficient, open to out-of-the-box opportunities and evidence-based. Most strategy books focus on Grand Strategy, the process that leads to high-level recommendations or, more accurately, hypotheses about where and how to compete. While this book briefly covers critical Grand Strategy practices, it deep dives into Operational Strategy, the process of validation, adaptation and possible rejection of those hypotheses. Operational Strategy is based on an in-depth understanding of customer preferences and anticipating the choices they make. Those choices rather than managers' ambitions determine whether a strategy will generate the aspired financial results. The book explains, by means of detailed real-world cases across industries, how to generate validated solutions to any strategic problem such as: how to enter successfully into new markets, either as an innovator or as a latecomer? How to defend one's position against aggressive new entrants? Or how to sustain margins when price is the only thing customers seem to care about? This remarkable book contains expert advice from accomplished strategic advisors and thought leaders Daniel Deneffe and Herman Vantrappen. Fad Free Strategy will be a useful tool for smart business executives at mainstream companies who are disappointed with strategy fads and simplistic solutions based on cherry-picked, anecdotal evidence from today's hero companies. It will also appeal to economics faculty members teaching graduate courses in business strategy who are looking for an economics-based strategy textbook that is both rigorous and comprehensive. The book's core ideas have been taught successfully in continuing and executive education programs at Harvard University and Hult International Business School.

Secured transactions law has been subjected to a close scrutiny over the last two decades. One of the main reasons for this is the importance of availability of credit and the consequent need to reform collateral laws in order to improve access to finance. The ability to give security effectively influences not only the cost of credit but also, in some cases, whether credit will be available at all. This requires rules that are transparent and readily accessible to non-lawyers as well as rules that recognise the needs of small and medium-sized enterprises. This book critically engages with the challenges posed by inefficient secured credit laws. It offers a comparative analysis of the reasons and the needs for a secured transactions law reform, as well as discussion of the steps taken in many common law, civil law and mixed law jurisdictions. The book, written under the auspices of the Secured Transactions Law Reform Project, informs the debate about reform and advances novel arguments written by

world renowned experts that will build upon the existing literature, and as such will be of interest to academics, legal practitioners and the judiciary involved in secured transactions law around the world. The text considers reform initiatives that have taken place up to the end of April 2016. It has not been possible to incorporate events since then into the discussion. However, notable developments include the banks decree passed by the Italian Government on 29th June 2016, and the adoption of the Model Law on Secured Transactions by UNCITRAL on 1st July 2016.
