Thomas the Tank Engine Man Random House Books for Young Readers

The Reverend W. Awdry was a devoted pastor and family man, who adored trains. He started to tell stories about Thomas the Tank Engine and his friends in order to entertain his son Christopher. Those stories have now gone on to entertain generations of children around the world. A convinced pacifist, Awdry was thrown out of one curacy and denied another during World War II,

because of his beliefs. He was a man of courage, who believed that you should live by certain rules. He built his imaginary world on the island of Sodor on these rules, and showed how those who transgressed them would always be "punished, but never scrapped," as he said. The Thomas the Tank Engine Man is a charming biography and a fascinating insight into the life of Reverend W. Awdry. First published 20 years ago before the Britt Allcroft/Ringo Starr animations took Thomas to a worldwide TV generation, this biography is now fully revised and updated.

With a focus on ecology, economy and engine performance, diesel engines are explored in relation to current research and developments. The prevalent trends in this development are outlined with particular

focus on the most frequently used alternative fuels in diesel engines; the properties of various type of biodiesel and the concurrent improvement of diesel engine characteristics using numeric optimization alongside current investigation and research work in the field.

Following of a short overview of engine control, aftertreatment and alternative fuels, Green Diesel Engine explores the effects of biodiesel usage on injection, fuel spray, combustion, and tribology characteristics, and engine performance.

Additionally, optimization procedures of diesel engine characteristics are discussed using practical examples and each topic is corroborated and supported by current research and detailed illustrations. This thorough discussion provides a solid foundation in the current research but also a starting point for fresh ideas for engineers involved in developing/adjusting diesel engines for usage of alternative fuels, researchers in renewable energy, as well as to engineers, advanced undergraduates, and postgraduates.

During aviation's pioneering

years Francis Kennedy McClean influence on early aviation, and used his vast inherited wealth to help the now famous Short Brothers company become established as one of Britain's greatest aircraft manufacturers and, in doing so, he helped the Royal Navy's first pilots into the air. In effect, he was Godfather to British naval aviation. But McClean did much more than even that. He was himself a balloonist and pioneer aviator, flying with Wilbur Wright in France in December 1908. He provided the Royal Aero Club with one of the first flying grounds in the UK; personally purchased no fewer than sixteen aeroplanes from Short Brothers before the First World War, and also acted as the company's unpaid test pilot. Convinced that aviation was destined to play a vital role in the nation's defence, he made his own aeroplanes freely available for training and ensured that the Navy had a suitable site from which to fly, founding England's first naval flying school, at Eastchurch in Kent. His flight up the Thames to Westminster on 10 August 1912, during which he flew between the upper and lower spans of Tower Bridge and passed beneath the other bridges, caught the public imagination, but despite all these achievements he remained unassuming, modest and reticent. This is a fascinating and informative account of McClean's great

achievements and significant contribution to naval aviation are revealed here for the first time.
