How digital visual effects in film can be used to support storytelling: a guide for scriptwriters and students. Computer-generated effects are often blamed for bad Hollywood movies. Yet when a critic complains that "technology swamps storytelling" (in a review of Van Helsing, calling it "an example of everything that is wrong with Hollywood computer-generated effects movies"), it says more about the weakness of the story than the strength of the technology. In Digital

Storytelling, Shilo McClean shows how digital visual effects can be a tool of storytelling in film, adding narrative power as do sound, color, and "experimental" camera angles—other innovative film technologies that were once criticized for being distractions from the story. It is time, she says, to rethink the function of digital visual effects. Effects artists say—contrary to the critics—that effects always derive from story. Digital effects are a part of production, not post-production; they are becoming part of the story development process. Digital Storytelling is grounded in filmmaking, the scriptwriting process in particular. McClean considers crucial questions about digital visual effects—whether they undermine classical storytelling structure, if they always call attention to themselves, whether their use is limited to certain genres—and looks at contemporary films (including a chapter-long analysis of Steven Spielberg's use of computer-generated effects) and contemporary film theory to find the answers. McClean argues that to consider digital visual effects as simply contributing the "wow" factor underestimates them.

They are, she writes, the legitimate inheritors of film storycraft.

What habits are common among good college writers? Good college writers are curious, engaged, reflective, and responsible. They read critically. They write with purpose. They tune into their audience. They collaborate and seek feedback. They know credible evidence makes them credible researchers. They revise. The Bedford Handbook, based on surveys with more than 1,000 first-year college students, fosters these habits and offers more support than ever before for college reading and writing. New writing guides support students as they compose in

This collection of essays looks at the literary representations of space - physical, psychological political and cultural - from a perspective that is at once comparative and feminist. Combining historical analysis with literary theory, the contributors explore the changing definitions of woman's place through such themes as exile and exclusion, property and territoriality, and the body as interface between individual and communal identities. They show how maps of gender overlap with maps of status and how images of separate gender, class and racial terrain have often insidiously helped define social relations and group identities.

A call to redefine mobility so that it is connected, heterogeneous, intelligent, and personalized, as well as sustainable, adaptable, and city-friendly. The twentieth century was the century of the automobile; the twenty-first will see mobility dramatically re-envisioned. Automobiles altered cityscapes, boosted economies, and made personal mobility efficient and convenient for many. We had a century-long love affair with the car. But today, people are more attached to their smartphones than their cars. Cars are not always the quickest mode of travel in cities; and emissions from the rapidly growing number of cars threaten the planet. This book, by three experts from industry and academia, envisions a new world of mobility that is connected, heterogeneous, intelligent, and personalized (the CHIP architecture). The authors describe the changes that are coming. City administrators are shifting from designing cities for cars to designing cities for people. Nations and cities will increasingly employ targeted user fees and offer subsidies to nudge consumers toward more sustainable

modes. The sharing economy is coaxing many consumers to shift from being owners of assets to being users of services. The auto industry is responding with connected cars that double as virtual travel assistants and by introducing autonomous driving. The CHIP architecture embodies an integrated, multimode mobility system that builds on ubiquitous connectivity, electrified and autonomous vehicles, and a marketplace open to innovation and entrepreneurship. Consumers will exercise choice on the basis of user experience and efficiency, aided by "intelligent advisors," accessible through their mobile devices. An innovative mobility architecture reconfigured for this century is a social and economic necessity; this book charts a course for achieving it.
