This book uses the very latest research to examine current interactions between religion, migration and existential wellbeing. In particular, it demonstrates the role of religion and religious organizations in the social, medical and existential wellbeing of immigrants within their host societies. By focusing on the role and politics of religion and religious organisations as well as the religious identity and faith of individuals, it

highlights the connection between existential wellbeing, integration and social cohesion. The book brings together researchers from various disciplines taking on the challenge to elaborate on the theme of this book from different perspectives, using different methods and theories with a wide selection of cases from various parts of the world. The value of multidisciplinary research on the role of religion in a globalised society – locally, nationally and internationally – is important for understanding the composition and potential solutions to social and political problems. Religious aspects and organisations are present in legal, political and social forms of governance and form the basis for future research on e.g. secularisation, democracy, minorities, human rights, welfare, healthcare and identity formation. These and other related topics are discussed in this book. This book is an up-to-date and multifaceted

Environmental pollution resulting from widespread pesticide application has become a serious worldwide problem. *Plant Pathogenesis and Disease Control* is an important new reference that addresses this problem by exploring the biochemical and molecular mechanisms of plant pathogenesis and emphasizing the use of "pest control agents" rather than "pesticides" for plant disease control. Topics examined include pathogenicity, the resistance of plants against pathogens, the offensive and defensive struggle between hosts and parasites, methods for using natural defense mechanisms to develop environmentally sound disease control agents, and the use of modern biotechnology for plant disease control. The book will be an essential reference for phytopathologists, plant biochemists, pesticide chemists, mycologists, plant cell technologists, and agricultural researchers.

### **Coastlines of the Black Sea**

This is an absorbing account of the continuing battle to control hospital infections, from the earliest days of hospital care when bad air or miasma was thought to be the cause, to the present day and the emergence of antibiotic-resistant 'superbugs' such as MRSA and necrotizing fasciitis. It succeeds on many levels: as a fascinating social history of hospital care from mediaeval times, when patients endured verminous conditions, to the present day; as a survey of the rise, fall and emergence of new nosocomial infections; and as a chronological account of the emergence of medical microbiology and infection control. The pivotal roles of key personalities such as Joseph Lister, Florence Nightingale, Louis Pasteur and Robert Koch are highlighted, and the history of this subject illuminates not only why hospitals and infections have had such an intimate and long relationship but one that seems destined to continue well into the future.
