This volume brings into being the field of Byzantine intellectual history.

Shifting focus from the cultural, social, and economic study of Byzantium to the life and evolution of ideas in their context, it provides an authoritative history of intellectual endeavors from Late Antiquity to the fifteenth century. At its heart lie the transmission, transformation, and shifts of Hellenic, Christian, and Byzantine ideas and concepts as exemplified in diverse aspects of intellectual life, from philosophy, theology, and rhetoric to astrology, astronomy, and politics. Case studies introduce the major players in Byzantine intellectual life, and particular emphasis is placed on the reception of ancient thought and its significance for secular as well as religious modes of thinking and acting. New insights are offered regarding controversial, understudied, or promising topics of research, such as philosophy and medical thought in Byzantium, and intellectual exchanges with the Arab world.

Cross-Cultural Encounters in Modern World History explores cultural contact as an agent of change. It takes an encounters approach to world history since 1500, rather than a political one, to reveal different perspectives and experiences as well as key patterns and transformations. It studies the spaces between cultures historically to help us transcend human differences today in a rapidly globalizing world. The text focuses on first encounters that suggest long-term developments and particularly significant encounters that have changed the direction of world history. Because of the complexities of these encounters, the author takes a user-friendly approach to keep the text accessible to students with

varying backgrounds in history.

From the origins of drinking to the use and abuse of alcohol in the present day, this global historical study draws on approaches and research from biology, anthropology, sociology and psychology. Topics covered include: the impact of colonialism alcohol before the world economy industrialization and alcohol globalization, consumer society, and alcohol. Gina Hames argues that the production, trade, consumption, and regulation of alcohol have shaped virtually every civilization in numerous ways. It has perpetuated the development of both domestic and international trade; helped create identity and define religion; provided a tool for oppression as well as a tool for cultural and political resistance; and has supplied governments with essential revenues as well as a means of control over minority groups. *Alcohol in World History* is one of the first studies to pull together such a wide range of sources in order to compare the role of alcohol throughout time and across both western and non-western civilizations.

Human Rights in World History Rowman & Littlefield Publishers
Civilization from its origins has depended on the food, fibre, and other commodities produced by farmers. In this unique exploration of the world history of agriculture, Mark B. Tauger looks at farmers, farming, and their relationships to non-farmers from the classical societies of the Mediterranean and China through to the twenty-first century. Viewing farmers as the most important human interface between civilization and the natural world, *Agriculture in World History* examines the ways that urban societies have both exploited and supported farmers, and together have endured the environmental changes and crises that threatened food production. Accessibly written and following a chronological

structure, Agriculture in World History illuminates these topics through studies of farmers in numerous countries all over the world from Antiquity to the contemporary period. Key themes addressed include the impact of global warming, the role of political and social transformations, and the development of agricultural technology. In particular, the book highlights the complexities of recent decades: increased food production, declining numbers of farmers, and environmental, economic, and political challenges to increasing food production against the demands of a growing population. This wide-ranging survey will be an indispensable text for students of world history, and for anyone interested in the historical development of the present agricultural and food crises.?

Waves of Global Change John Murray
 The second edition of this concise survey offers a comparative and comprehensive study of culinary cultures and food politics throughout the world, from ancient times to the present day. It examines the long history of globalization of foods as well as the political, social, and environmental implications of our changing relationship with food, showing how hunger and taste have been driving forces in human history. Including numerous case studies from diverse societies and periods, *Food in World History* explores such questions as: What social factors have historically influenced culinary globalization? How did early modern plantations establish patterns for modern industrial food production? Were eighteenth-century food riots comparable to contemporary social movements around food? Did Italian and Chinese migrant cooks sacrifice authenticity to gain social acceptance in the Americas? Have genetically modified foods fulfilled the promises made by proponents? This new edition includes expanded discussions of gender and the family, indigeneity, and the politics of food. Expanded chapters on contemporary food systems and culinary pluralism examine debates over the concentration of corporate control over seeds and marketing, authenticity and exoticism within the culinary tourism industry, and the impact of social media on restaurants and home cooks.

The industrial revolution was the single most important development in human history over the past three centuries, and it continues to shape the contemporary world. With new methods and organizations for producing goods, industrialization altered where people live, how they play, and even how they define political issues. By exploring the ways the industrial revolution reshaped world history, this book offers a unique look into the international factors that started the industrial revolution and its global spread and impact. In the fourth edition, noted historian Peter N. Stearns continues his global analysis of the industrial revolution with new discussions of industrialization outside of the West, including the study of India, the Middle East, and China. In addition, an expanded conclusion contains an examination of the changing contexts of industrialization.

The Industrial Revolution in World History is essential for students of world history and economics, as well as for those seeking to know more about the global implications of what is arguably the defining socioeconomic event of modern times.

CDC Yellow Book 2018: Health Information for International Travel Human Journey

Imagined Geographies is a pioneering work in the study of history and geography of the pre-1800 world. In this book, Gunn argues that different regions astride the maritime silk roads were not only interconnected but can also be construed as "imagined geographies."

Taking a grand civilizational perspective, five such geographic imaginaries are examined across respective chapters, namely Indian, Arabic, Chinese, Japanese, and European including an imagined Great South Land. Drawing upon an array of marine and other archaeological examples, the author offers compelling evidence of the intertwining of political, cultural, and economic regions across the sea silk roads from ancient times until the seventeenth century. Through a thorough analysis of these five geographic imaginaries, the author sets aside purely national history and looks at the maritime realm from a broader spatial perspective. He challenges the Eurocentric concept of center and periphery and establishes a revisionist view on a decentered world regional history. This book will definitely interest history lovers from all around the world who want to know more about how their forebears viewed their respective region and how their region fits into world history with local uniqueness. "Gunn takes large themes and makes them understandable. He is not afraid to make the grand

statement, and to look at the sweep of history all in one arc. I admire that greatly; this is not history for the faint of heart. But it is history well-done, and history that can show the forest from the trees." —Eric Tagliacozzo, John Stambaugh Professor of History, Cornell University "This is one of the most ambitious and insightful books that I have read on pre-Modern maritime Asia. The author offers fascinating perspectives on how this vast region was imagined, charted, and experienced over many centuries. That requires mastery of an immense range of scholarship and primary sources. His aim is to knit this watery world together into a conceptual whole. This mission is accomplished with style and discipline."

Encouraging a broad understanding of continuity, change, and innovation in human history, *Patterns in World History* presents the global past in a comprehensive, even-handed, and open-ended fashion. Instead of focusing on the memorization of people, places, and events, this text strives to present important facts in context and draw meaningful connections by examining patterns that have emerged throughout global history.

Patterns of World History offers a distinct framework for understanding the global past through the study of origins, interactions, and adaptations. Authors Peter von Sivers, Charles A. Desnoyers, and George Stow — each specialists in their respective fields — examine the full range of human

ingenuity over time and space in a comprehensive, even-handed, and critical fashion. The book helps students to see and understand patterns through: ORIGINS -

INTERACTIONS - ADAPTATIONS

These key features show the O-

A-I framework in action: *

Seeing Patterns, a list of

key questions at the

beginning of each chapter,

focuses students on the 3-5

over-arching patterns, which

are revisited, considered,

and synthesized at the end of

the chapter in Thinking

Through Patterns. * Each

chapter includes a Patterns

Up Close case study that

brings into sharp relief the

O-I-A pattern using a

specific idea or thing that

has developed in human

history (and helped, in turn,

develop human history), like

the innovation of the Chinese

writing system or religious

syncretism in India. Each

case study clearly shows how

an innovation originated

either in one geographical

center or independently in

several different centers. It

demonstrates how, as people

in the centers interacted

with their neighbors, the

neighbors adapted to - and in

many cases were transformed

by - the idea, object, or

event. Adaptations include

the entire spectrum of human

responses, ranging from

outright rejection to

creative borrowing and, at

times, forced acceptance.

World History & Geography Simon

The Human Journey offers a truly

concise yet satisfyingly full

history of the world from ancient

times to the present. The book's

scope, as the title implies, is

the whole story of humanity, in

planetary context. Its themes

include not only the great

questions of the humanities—nature

versus nurture, the history and

meaning of human variation, the

sources of wealth and causes of

revolution—but also the major

transformations in human history:

agriculture, cities, iron,

writing, universal religions,

global trade, industrialization,

popular government, justice, and equality. In each conceptually rich chapter, leading historian Kevin Reilly concentrates on a single important period and theme, sustaining a focused narrative and analytical perspective. Chapter 2, for example, discusses the

significance of bronze-age

urbanization and the advent of the

Iron Age. Chapter 3 examines the

meaning and significance of the

age of "classical" civilizations.

Chapter 4 explains the spread of

universal religions and new

technologies in the postclassical

age of Eurasian integration. But

these examples also reveal a range

of approaches to world history.

The first chapter is an example of

current "Big History," the second

of history as technological

transformations, the third of

comparative history, the fourth

the history of connections that

dominates, and thus narrows, so

many texts. Free of either a

confined, limiting focus or a

mandatory laundry list of topics,

this book begins with our most

important questions and searches

all of our past for answers. Well-

grounded in the latest

scholarship, this is not a fill-in-

the-blanks text, but world history

in a grand humanistic tradition.
