A study on the lesser-known origins of affirmative action argues that key programs passed during the New Deal and Fair Deal era of the 1930s and 1940s were purposefully discriminatory, revealing how Southern democrats widened the gap between black and white Americans through specific restrictions in social security, the GI bill, and landmark labor laws. What does it mean to be a young Jewish man? Who am I? How do I feel about myself? Do I seem cool? Do I fit in? These overarching teen boys' concerns are addressed head on through the voices of contemporary Jewish teens, men, and biblical and historical stories. The JGuy's Guide helps young teens see how Judaism can help them navigate the often choppy waters of adolescence while it strengthens Jewish identity and pride. This interactive book encourages personal reflection and discussion, making it ideal for the individual teenager as well as education and discussion groups. Its candid approach explores dilemmas boys face in their daily lives: the pressure to excel at sports, school and social life; the courage to speak up when friends make questionable choices or parents act hypocritically; and more. Like the Talmud, the book offers many perspectives and reflection questions to help boys find their own truths.

This reference and handbook describes static, kinematic and dynamic Global Positioning System (GPS) theory, algorithms and applications. It is primarily based on source-code descriptions of the KSGSoft program developed by the author at the GFZ in Potsdam. The theory and algorithms are revised and extended for a new development of a multiple functional GPS software. New concepts such as the unified GPS data processing method and ambiguity-ionospheric algorithm, as well as general ambiguity search criteria, are reported for the first time. Mathematically rigorous, the book begins with the basics of coordinate and time systems and satellite orbits, as well as GPS observables, and deals with topics such as physical influences, observation equations, adjustment and filtering, ambiguity resolution, data processing, kinematic positioning, and the determination of perturbed orbits.

"Why Won't You Just Tell Us the Answer?" Chicago Review Press

GPS Declassified examines the development of GPS from its secret, Cold War military roots to its emergence as a worldwide consumer industry. Drawing on previously unexplored documents, the authors examine how military rivalries influenced the creation of GPS and shaped public perceptions about its origin. Since the United States' first program to launch a satellite in the late 1950s, the nation has pursued dual paths into space—one military and secret, the other scientific and public. Among the many commercial spinoffs this approach has produced, GPS arguably boasts the greatest impact on our daily lives. Told by the son of a navy insider—whose work helped lay the foundations for the system—and a science and technology journalist, the story chronicles the research and technological advances required for the development of GPS. The authors peek behind the scenes at pivotal events in GPS history. They note how the technology moved from the laboratory to the battlefield to the dashboard and the smartphone, and they raise the specter of how this technology and its surrounding industry affect public policy. Insights into how the system works and how it fits into a long history of advances in navigation tie into discussions of the myriad applications for GPS.

Spanning millennia and continents, here is a stunningly revealing history of how the distribution of water has shaped human civilization. Boccaletti, of *The Nature Conservancy*, “tackles the most important story of our time: our relationship with water in a world of looming scarcity” (Kelly McEvers, NPR Host). Writing with authority and brio, Giulio Boccaletti—honorary research associate at the Smith School of Enterprise and the Environment, University of Oxford—shrewdly combines environmental and social history, beginning with the earliest civilizations of sedentary farmers on the banks of the Nile, the Tigris, and the Euphrates Rivers. Even as he describes how these societies were made possible by sea-level changes from the last glacial melt, he incisively examines how this type of farming led to irrigation and multiple cropping, which, in turn, led to a population explosion and labor specialization. We see with clarity how irrigation's structure informed social structure (inventions such as the calendar sprung from agricultural necessity); how in ancient Greece, the communal ownership of wells laid the groundwork for democracy; how the Greek and Roman experiences with water security resulted in systems of taxation; and how the modern world as we know it began with a legal framework for the development of water infrastructure. Extraordinary for its monumental scope and piercing insightfulness, *Water: A Biography* richly enlarges our understanding of our relationship to—and fundamental reliance on—the most elemental substance on earth.

The Money GPS St. Martin's Essentials

Every major measure of students' historical understanding since 1917 has demonstrated that students do not retain, understand, or enjoy their school experiences with history. Bruce Lesh believes that this is due to the way we teach history -- lecture and memorization. Over the last fifteen years, Bruce has refined a method of teaching history that mirrors the process used by historians, where students are taught to ask questions of evidence and develop historical explanations. --from publisher description.

The New World History is a comprehensive volume of essays selected to enrich world history teaching and scholarship in this rapidly expanding field. The forty-four articles in this book take stock of the history, evolving literature, and current trajectories of new world history. These essays, together with the editors' introductions to thematic chapters, encourage educators and students to reflect critically on the development of the field and to explore concepts, approaches, and insights valuable to their own work. The selections are organized in ten chapters that survey the history of the movement, the seminal ideas of founding thinkers and today's practitioners, changing concepts of

world historical space and time, comparative methods, environmental history, the “ big history ” movement, globalization, debates over the meaning of Western power, and ongoing questions about the intellectual premises and assumptions that have shaped the field.

The Handy Geography Answer Book Rockport Pub

Covers the latest developments in PNT technologies, including integrated satellite navigation, sensor systems, and civil applications. Featuring sixty-four chapters that are divided into six parts, this two-volume work provides comprehensive coverage of the state-of-the-art in satellite-based position, navigation, and timing (PNT) technologies and civilian applications. It also examines alternative navigation technologies based on other signals-of-opportunity and sensors and offers a comprehensive treatment on integrated PNT systems for consumer and commercial applications. Volume 1 of Position, Navigation, and Timing Technologies in the 21st Century: Integrated Satellite Navigation, Sensor Systems, and Civil Applications contains three parts and focuses on the satellite navigation systems, technologies, and engineering and scientific applications. It starts with a historical perspective of GPS development and other related PNT development. Current global and regional navigation satellite systems (GNSS and RNSS), their inter-operability, signal quality monitoring, satellite orbit and time synchronization, and ground- and satellite-based augmentation systems are examined. Recent progresses in satellite navigation receiver technologies and challenges for operations in multipath-rich urban environment, in handling spoofing and interference, and in ensuring PNT integrity are addressed. A section on satellite navigation for engineering and scientific applications finishes off the volume. Volume 2 of Position, Navigation, and Timing Technologies in the 21st Century: Integrated Satellite Navigation, Sensor Systems, and Civil Applications consists of three parts and addresses PNT using alternative signals and sensors and integrated PNT technologies for consumer and commercial applications. It looks at PNT using various radio signals-of-opportunity, atomic clock, optical, laser, magnetic field, celestial, MEMS and inertial sensors, as well as the concept of navigation from Low-Earth Orbiting (LEO) satellites. GNSS-INS integration, neuroscience of navigation, and animal navigation are also covered. The volume finishes off with a collection of work on contemporary PNT applications such as survey and mobile mapping, precision agriculture, wearable systems, automated driving, train control, commercial unmanned aircraft systems, aviation, and navigation in the unique Arctic environment. In addition, this text: Serves as a complete reference and handbook for professionals and students interested in the broad range of PNT subjects. Includes chapters that focus on the latest developments in GNSS and other navigation sensors, techniques, and applications. Illustrates interconnecting relationships between various types of technologies in order to assure more protected, tough, and accurate PNT. Position, Navigation, and Timing Technologies in the 21st Century: Integrated Satellite Navigation, Sensor Systems, and Civil Applications will appeal to all industry professionals, researchers, and academics involved with the science, engineering, and applications of position, navigation, and timing technologies. pnt21book.com

Utah's history is overflowing with legends. For the past 25 years, Dale Bascom has been collecting stories, maps, and documentation about Utah's legends. In *Following the Legends*, he attempts to draw the line between fact and fiction in the quest for treasure and adventure. With the assistance of modern technology, GPS equipment, and mapping software, the search for treasure takes on a whole new meaning. *Following the Legends* combines old rumors with new tools to shed light on Utah's rich history. This compilation of legends, true stories, expert advice, and practical wisdom is ideal for both the curious and the adventurous alike.

The Collapse John Wiley & Sons Incorporated

From one of the most important intellectuals of our time comes an extraordinary story of exile and a celebration of an irrecoverable past. A fatal medical diagnosis in 1991 convinced Edward Said that he should leave a record of where he was born and spent his childhood, and so with this memoir he rediscovers the lost Arab world of his early years in Palestine, Lebanon, and Egypt. Said writes with great passion and wit about his family and his friends from his birthplace in Jerusalem, schools in Cairo, and summers in the mountains above Beirut, to boarding school and college in the United States, revealing an unimaginable world of rich, colorful characters and exotic eastern landscapes. Underscoring all is the confusion of identity the young Said experienced as he came to terms with the dissonance of being an American citizen, a Christian and a Palestinian, and, ultimately, an outsider. Richly detailed, moving, often profound, *Out of Place* depicts a young man's coming of age and the genesis of a great modern thinker.
