A leader in the field presents a cohesive narrative of world history that effectively addresses the main challenge of the introductory survey: how to navigate beginning students through the vast detail of the subject. McNeill uses connective webs—along which trade, religious beliefs, technologies, pathogens, and much else traveled—to organize details and keep the big picture in view. Students emerge with clear takeaways and a strong sense of the basic

dynamics of world history. Together with digital resources that amplify the web's approach and highlight diverse types of evidence, John McNeill's *The Webs of Humankind* offers a clear and effective teaching tool for the world history survey course.

Featuring fifty primary source documents introduced within an historical narrative, Conversations of Modern World History: 50 Voices from 1400 to the Present offers readers an overview of the last six hundred years of the human experience. From the Chinese Ming dynasty to the emerging Russian Federation, students learn stories and perspectives of the past as told by those who lived them. Both a textbook and a source reader, Conversations of Modern World History provides the historical and biographical contexts needed to understand and thoughtfully react to the conversation of history. A diverse group of men and women offer their perspective of various moments in history through their speeches, political statements, books, and journals. Each annotated document naturally leads to the next, helping readers understand that historical events were interconnected and that current discussions have roots going back hundreds of years. Conversations of Modern World History combines the best of general narrative textbooks, short biographies, and primary source readers to help students see the interconnectedness of humanity past and present. It is an ideal text for world history survey courses from the 1400s onward. Zachary Wingerd earned his Ph.D. in transatlantic history from the University of Texas, Arlington. He taught at Lon Morris College and the University of Texas, Tyler before joining the faculty at Baylor University. Dr. Wingerd has taught courses in world, American, Atlantic,

Texas, and Latin American history, as well as historiography.

Glencoe World History Pearson Prentice Hall

In this concise, accessible introductory survey of the history of the United States from 1790 to the present day, Edward J. Davies examines key themes in the evolution of America from colonial rule to international supremacy. Focusing particularly on those currents within US history that have influenced the rest of the world, the book is neatly divided into three parts which examine the Atlantic world, 1700 – 1800, the US and the industrial world, and the emergence of America as a global power. The United States in World History explores such key issues as: the dynamics of the British Atlantic community the American revolution the impact of industrialization on the US the expansion of US consumer and cultural industries the Cold War, and its implications for the US. Part of our successful Themes in World History series, The United States in World History presents a new way of examining the United States, and reveals how

concepts that originated in America's definition of itself as a nation – concepts such as capitalism, republicanism and race – have had supranational impact across the world.

In *Science in World History*, James Trefil presents a comprehensive, thematic survey of the history of

science from its roots in different cultures around the world through to the present day. He explores crucial milestones in scientific development and at the same time examines the enormous social and intellectual changes they initiated. Opening with a discussion of the key elements of modern scientific enterprise, the book goes on to explore the earliest scientific activities, moving through Greece and Alexandria, science in the Muslim world, and then on to Isaac Newton, atomic theory and the major developments of the nineteenth century. After examining the most recent scientific activities across the world, the book concludes by identifying future directions for the field. Suitable for introductory courses and ideal for students new to the subject, this concise and lively study reconsiders the history of science from the perspective of world and comparative history.

People have always lived in families, but what that means has varied dramatically across time and cultures. The family is not a "natural" phenomenon but an institution with a dynamic history stretching 10,000 years into the past. Mary Jo Maynes and Ann Waltner tell the story of this fundamental unit from the beginnings of domestication and human settlement. They consider the codification of rules governing marriage in societies around the ancient world, the changing conceptions of family wrought by

the heightened pace of colonialism and globalization in the modern world, and how state policies shape families today. The authors illustrate ways in which differences in gender and generation have affected family relations over the millennia. Cooperation between family members--by birth or marriage--has driven expansions of power and fusions of culture in times and places as different as ancient Mesopotamia, where kings' daughters became priestesses who mediated among the various cultures and religions of their fathers' kingdom, and sixteenth-century Mexico, in which alliances between Spanish men and indigenous women variously allowed for consolidation of colonial power or empowered resistance to colonial rule. But family discord has also driven - and been driven by - historical events such as China's 1919 May Fourth Movement, in which young people seeking an end to patriarchal authority were key participants. Maynes's and Waltner's view of the family as a force of history brings to light processes of human development and patterns of social life and allows for new insights into the human past and present.

Civilization from its origins has depended on the food, fibre, and other commodities produced by farmers. In this unique exploration of the world history of agriculture, Mark B. Tauger looks at farmers, farming, and their relationships to non-farmers from the classical societies of the Mediterranean and China through to the twenty-first century. Viewing farmers as the most important human interface between civilization and the natural world, *Agriculture in World History* examines the ways that urban societies have both exploited and supported farmers, and together have endured the environmental changes and crises that threatened food production. Accessibly written and following a chronological structure, *Agriculture in World History* illuminates these topics through studies of farmers in numerous countries all over the world from Antiquity to the contemporary period. Key themes addressed include the impact of global warming, the role of political and social transformations, and the development of agricultural technology. In particular, the book highlights the complexities of recent decades: increased food production, declining numbers of farmers, and environmental, economic, and political challenges to increasing food production against the demands of a growing population. This wide-ranging survey will be an indispensable text for students of world history, and for anyone interested in the historical development of the present agricultural and food crises.
