Prisoners of the Japanese in World War II Teachers College Press

On the morning of Sunday 7th December, 1941, 183 Japanese aircraft fly across the quiet American naval base of Pearl Harbor. After a few minutes, oil stocks and airfields are in flames, and several of the United States' largest battleships are heading towards the bottom of the harbour. The aim of the Japanese surprise attack is to hobble the United States once and for all, giving the empire a free hand to continue its conquests in Asia. But the assault has the opposite effect. As the shock subsides, Americans swear revenge and begin to methodically bring the mighty nation to its knees. Weapons factories spit out Hellcat and Dauntless planes, and in California, the yards launch one huge aircraft carrier after another. By the autumn of 1942, the US are ready to counterattack and invade the Japanese base on the South Sea at Guadalcanal. Pacific War follows the conflict in the Pacific, where dark clouds gather over the Kingdom of the Sun until two atom bombs drop in August 1945. World History invites you on a fascinating journey to bygone eras, allowing you to explore the greatest events in history. Take a trip back in time - to the frontlines of World War 2, to the Viking raids, and the religious rituals of ancient Egypt. World History is for everyone who would like to know more about the exciting and dramatic events of the past.

Topics treated range from early attempts in medieval England to measure the carrying capacity of ships, through the advent in Renaissance Italy and England of business newspapers that reported on the traffic of ships, cargoes and market prices, to the state of the economy of France over the two hundred years before the French Revolution and of the British West Indies between 1760 and 1790. Included is the story of Thomas Irving who challenged and thwarted the likes of John Hancock, Samuel Adams, Alexander Hamilton, George Washington and Thomas Jefferson.

What is often held to be Britain's 'finest hour' – the Second World War – was not experienced so uniformly across the British Isles. On the margins, the war was endured in profoundly different ways. While D-Day or Dunkirk is embedded in British collective memory, how many Britons can recall that Finns were interned on the Isle of Man, that enemy soldiers developed British infrastructure in Orkney, or that British subjects were sent to concentration camps from Guernsey? Such experiences, tangential to the dominant British war narrative, are commemorated elsewhere in the 'other British Isles'. In this remarkable contribution to British Island Studies, Daniel Travers pursues these histories and their commemoration across numerous local sites of memory: museums, heritage sites and public spaces. He examines the way these island identities assert their own distinctiveness over the British wartime story, and ultimately the way they fit into the

ongoing discourse about how the memory of the Second World War has been constructed since 1945. *The Whole World Was Watching* Rowman & Littlefield
This volume introduces and provides a brief overview of major factors that contributed to the Persian Gulf War in the Middle East. Then, it offers an in-depth, multinational perspective on the controversies surrounding the war, the current implications, and long-lasting effects. Prescott's sweeping account of Cortés's subjugation of the Aztec people has endured as a landmark work of scholarship and dramatic storytelling. This pioneering study presents a compelling view of the clash of civilizations that reverberates in Latin America to this day. **THE NAVAL WAR OF 1812** Published when its author, Theodore Roosevelt, was only twenty-three years old, *The Naval War of 1812* was immediately hailed as a literary and scholarly triumph, and it is still considered the definitive book on the subject. World History of Warfare Mark Twain Media

The Second World War is now recognized as a watershed for British poetry. The changes that arose were masked for some time by the enormous power and shock of the conflict itself, and by the restrictions on poetry publishing consequent on paper rationing and the general business of wartime. This anthology seeks to showcase not only the harrowingly beautiful poetry born from the conflict, but also the radical changes to style and form that came from the epoch and altered the face of British poetry. Featuring generous selections of famous poets, including Dylan Thomas, T. S. Eliot, and W. H. Auden, alongside works by civilians and soldiers,

the collection offers a symphony of different voices, all connected in their shared experience of the Second World War. Tim Kendall's introduction charts the history of the war poets' reception, explaining their relationship with their First World War predecessors and some of the reasons why they have never managed to reach such a wide audience. The work of each poet is prefaced with a biographical account which allows poems to be read in their historical context, and every poem is annotated with date of composition, publication history, and a gloss of words and allusions. As editor Kenneth E. Hendrickson, III, notes in his introduction: "Since the end of the nineteenth-century, industrialization has become a global phenomenon. After the relative completion of the advanced industrial economies of the West after 1945, patterns of rapid economic change invaded societies beyond western Europe, North America, the Commonwealth, and Japan." In *The Encyclopedia of the Industrial Revolution in World History* contributors survey the Industrial Revolution as a world historical phenomenon rather than through the traditional lens of a development largely restricted to Western society. *The Encyclopedia of the Industrial Revolution in World History* is a three-volume work of over 1,000 entries on the rise and spread of the Industrial Revolution across the world. Entries comprise accessible but scholarly explorations of topics from the "aerospace industry" to "zaibatsu." Contributor articles not only address topics of technology and technical innovation but emphasize the individual human and social experience of industrialization. Entries include generous selections of biographical figures and human communities, with articles on entrepreneurs, working men and women, families, and organizations. They also cover legal developments, disasters, and the environmental impact of the Industrial Revolution. Each entry also includes cross-references and a brief list of suggested readings to alert readers to more detailed information. *The Encyclopedia of the Industrial Revolution in World History* includes over 300 illustrations, as well as artfully selected, extended quotations from key primary sources, from Thomas Malthus' "Essay on the Principal of Population" to Arthur Young's look at Birmingham, England in 1791. This work is the perfect reference work for anyone conducting research in the areas of technology, business, economics, and history on a world historical scale. *Military Cold War Education and Speech Review Policies* U of Nebraska Press

The War to End All Wars Routledge

This two-volume set documents the essential role of the sea and maritime activity across history, from travel and food production to commerce and conquest. In all eras, water transport has served as the cheapest and most efficient means of moving cargo and people over any significant distance. Only relatively recently have railroads and aircraft provided an alternative. Most of the world's bulk goods continue to travel primarily by ship over water. Even today, 95 percent of the cargo that enters and leaves the United States does so by ship. Similarly, people around the world rely on the sea for food, and in recent years, the sea has become an important source of oil and other resources, with the longterm effects of our continuing efforts to extract resources from the sea further highlighting environmental concerns that range from pollution to the exhaustion of fish stocks. This chronologically organized two-volume reference addresses the history of the sea, beginning with ancient

civilizations (4000 to 1000 BCE) and ending with the modern era (1945 to the present day). Each of the eight chapters is further broken down into sections that focus on specific nations or regions, offering detailed descriptions of that area of the world and shorter entries on specific topics, individuals, and events. The book spans maritime history, covering major seafaring peoples and nations; famous explorers, travelers, and commanders; events, battles, and wars; key technologies, including famous ships; important processes and ongoing events, such as piracy and the slave trade; and more. Readers will benefit from dozens of primary source documents—ranging from ancient Egyptian tales of seafaring to texts by renowned travelers like Marco Polo, Zheng He, and Ibn Battuta—that provide firsthand accounts from the age of discovery as well as accounts of battle from World War I and II and more modern accounts of the sea.

Navies in Modern World History Cambridge University Press

Navies in Modern World History traces the role of navies in history from the early nineteenth century, through both World Wars, to the dawn of the twenty-first century and beyond. In a series of case studies Lawrence Sondhaus examines the national fleets of Britain, France, Germany, the United States, Japan, Brazil, Chile and the Soviet Union, and demonstrates the variety of ways in which each country has made decisive use of naval power. In each case the author argues that the navy in question helped change the course of modern world history; he also systematically analyses the challenges navies faced in assembling matériel, training personnel and performing their mission. This book discusses the leading role of navies and shipbuilders in key technological innovations of the nineteenth and early twentieth centuries, including advances in steam power, armor, artillery and torpedoes, and looks at aircraft carrier design and naval aviation in general in the second half of the twentieth century. It also explains how, today, technological breakthroughs are centered around naval stealth and maritime propulsion systems. Special attention is devoted to the evolving state of naval technology, and the book shows how the relative industrial capabilities of seafaring countries have been reflected in their maritime building programs, providing an important link between the evolution of modern national fleets and the broader history of the period.

Poetry of the Second World War Lindhardt og Ringhof

In the Cold War era, the confrontation between capitalism and communism played out not only in military, diplomatic, and political contexts, but also in the

realm of culture—and perhaps nowhere more so than the cultural phenomenon of sports, where the symbolic capital of athletic endeavor held up a mirror to the global contest for the sympathies of citizens worldwide. The Whole World Was Watching examines Cold War rivalries through the lens of sporting activities and competitions across Europe, Asia, Africa, Latin America, and the U.S. The essays in this volume consider sport as a vital sphere for understanding the complex geopolitics and cultural politics of the time, not just in terms of commerce and celebrity, but also with respect to shifting notions of race, class, and gender. Including contributions from an international lineup of historians, this volume suggests that the analysis of sport provides a valuable lens for understanding both how individuals experienced the Cold War in their daily lives, and how sports culture in turn influenced politics and diplomatic relations.
