In response to increased focus on the protection of intangible cultural heritage across the world, Music Endangerment offers a new practical approach to assessing, advocating, and assisting the sustainability of musical genres. Drawing upon relevant ethnomusicological research on globalization and musical diversity, musical change, music revivals, and ecological models for sustainability, author Catherine Grant systematically critiques strategies that are currently employed to support endangered musics. She then constructs a comparative framework between language and music, adapting and applying the measures of language endangerment as developed by UNESCO, in order to identify ways in which language maintenance might (and might not) illuminate new pathways to keeping these musics strong. Grant's work presents the first

in-depth, standardized, replicable tool for gauging the level of vitality of music genres, providing an invaluable resource for the creation and maintenance of international cultural policy. It will enable those working in the field to effectively demonstrate the degree to which outside intervention could be of tangible benefit to communities whose musical practices are under threat. Significant for both its insight and its utility, Music Endangerment is an important contribution to the growing field of applied ethnomusicology, and will help secure the continued diversity of our global musical traditions.

The past is not simply a list of events. Historical records are the means by which historians develop their interpretations of those events. Because interpretations differ, there is no single historical record, but various narrations of events each told from a different perspective. Therefore the study of history is intimately linked to the study of values, the values of the historical actors, the historians who have written about them, and of the students engaged in learning about them. *The World's History* links chronology, themes, and geography in eight units, or Parts, of study. The Parts move progressively along a time line from the emergence of early humans to

the present day. Each Part emphasizes a single theme--for example, urbanization or religion or migration--and students learn to use them all to analyze historical events and to develop a grasp of the chronology of human development. The final chapter employs all the themes developed in the first seven Parts as tools for understanding the history of our own times. Geographically, each Part covers the entire globe, although specific topics place greater emphasis on specific regions.

What in the World is Music? Second Edition is an undergraduate, interactive e-textbook that explores the shared ways people engage with music and how humans organize and experience sound. It adopts a global approach, featuring more than 300 streaming videos and 50 streaming audio tracks of music from around the world. Drawing from both musicological and ethnomusicological modes of inquiry, the authors explain the nature and meaning of music as a universal human practice, making no distinction between Western and non-Western repertoires while providing students with strong points of connection to the ways it affects their own lives. The What in the World is Music? curriculum is divided into five parts, with a fully integrated multimedia program linked directly to the chapters: The Foundations of Music I proposes a working definition of "music" and considers inquiry-guided approaches to its study: Why do humans have innate musical perception? How does this ability manifest itself in the human voice? A catalog of musical instruments showcases global diversity and human ingenuity. The

Foundations of Music II continues the inquiry-guided approach, recognizing the principles by which musical sound is organized while discussing elements such as rhythm, melody, harmony, texture, form, genre, and style. Where did music come from? What is it for? Music and Identity examines how music operates in shaping, negotiating, and expressing human identity and is organized around three broad conceptual frames: the group, hybridity, and conflict. Music and the Sacred addresses how music is used in religious practices throughout the world: chanting sacred texts and singing devotional verses, inspiring religious experience such as ecstasy and trance, and marking and shaping ritual space and time. Music and Social Life analyzes the uses of music in storytelling, theater, and film. It delves into the contributions of sound technologies, while looking at the many ways music enhances nightlife, public ceremonies, and festivals.
