This book presents WHO guidelines for the protection of public health from risks due to a number of chemicals commonly present in indoor air. The substances considered in this review, i.e. benzene, carbon monoxide, formaldehyde, naphthalene, nitrogen dioxide, polycyclic aromatic hydrocarbons (especially benzo[a]pyrene), radon, trichloroethylene and tetrachloroethylene, have indoor sources, are known in respect of their hazardousness to health and are often found indoors in concentrations of health concern. The guidelines are targeted at public health professionals involved in preventing health risks of environmental exposures, as well as specialists and authorities involved in the design

and use of buildings, indoor materials and products. They provide a scientific basis for legally enforceable standards.

It is not the presence of microorganisms, but their interaction with patients that determines their influence on wound healing. Documenting this

critical but often ignored aspect of the treatment process, Microbiology of Wounds discusses the microbiology and biology of human wounds in relation to infection and non-healing. Gain the Necessary Scientific and Clinical Knowledge Pertaining to Chronic and Acute Wounds The practice of wound healing is dynamic, infinitely complex, nonlinear, and prodigiously individualized to the patient. When one considers the myriad host variables that contribute to the disease state, understanding the intricacies of chronic wounds becomes even more difficult. This book presents

the necessary scientific and clinical data pertaining to chronic and acute wounds, and discusses inflammation, epithelialization, granulation tissue, and tissue remodeling. It details techniques for treating chronic and acute wounds and covers the mode of action and efficacy of anti-infectives used in treating wounds. Microbiology of Wounds answers the call for a definitive reference on chronic and acute wounds.

This edited collection focuses on the global growth

of privatisation and private sector medicine in both developed and lesser developed countries, and the impact of this on patients, health workers, managers and policy-makers. Drawing upon sociological theories, concepts and insights, as well as experts from several countries with extensive experience in researching the field either nationally or internationally, the collection offers a unique perspective on healthcare services and healthcare systems: a view from those

trying to access healthcare services, working inside health systems, or responsible for managing and organising services. Collectively, the chapters contribute an international perspective on the navigation of healthcare systems, and addresses the growing salience of 'choice' between public and private medicine in a variety of different national systems and contexts.
