1. Modern web applications: an overview. Why do we want to write single page apps? The main reason is that they allow us to offer a more-native-app-like experience to the user. This is hard to do with other approaches.

Noto · Noto

Traditionally, web applications have been architected so that the back-end houses all the front-end code. This has resulted in heavy projects that are difficult to manage and scale. This book will explain a new way to write web applications by treating the front-end as if it were a third-party (such as a mobile client).
