Volumes in Writing Spaces: Readings on Writing offer multiple perspectives on a wide-range of topics about writing, much like the model made famous by Wendy Bishop 's " The Subject Is . . . " series. In each chapter, authors present their unique views, insights, and strategies for writing by addressing the undergraduate reader directly. Drawing on their own experiences, these teachers-as-writers invite students to join in the larger conversation about developing nearly every aspect of craft of writing. Consequently, each essay functions as a standalone text that can easily complement other selected readings in writing or writing-intensive courses across the disciplines at any level. Topics in Volume 1 of the series include academic writing, how to interpret writing assignments, motives for writing, rhetorical analysis, revision, invention, writing centers, argumentation, narrative, reflective writing, Wikipedia, patchwriting, collaboration, and genres.

In Writing to Explore, David and Peter demonstrate how to teach adventure writing, which integrates nonfiction and fiction and motivates students to write with imagination, curiosity, and a hunger to learn everything about their topic. The book starts with a solid foundation in the basics of good writing: setting descriptions, writing atmosphere, and character development. The authors then explore the specific elements of adventure writing--from setting the stage to conducting research; from combining history and geography to effectively utilizing technology. The result is an adventure-

based paper that is "rooted in real places, supported by facts, and developed with detailed description of images from real locations." Teachers will find handouts, sample activities, student writing examples, research sources, and tips to help them create a nonfiction writing program based around the adventure writing model. Research papers don't have to be boring to read or to write. This book will show you how to get vibrant papers from your students--papers that teach both reader and writer something new.

Students thrive in classrooms where they feel safe, welcome, and supported. Building a sense of community and teamwork is an effective means of facilitating student success. Burns skillfully blends community-building activities with real classroom content, providing students with opportunities to practice language skills while acclimatizing to the classroom. While intended primarily for language arts and English as a second language classrooms, Burns's activities readily adapt to a range of disciplines and age groups. Beginning with a section on setting classroom and instructor expectations, Burns moves on to team-building exercises focused on lesson content. His section on getting-to-know-you activities is designed to foster a sense of belonging, while the five get-to-know-your-teacher exercises introduce you to your students in a fun, relaxed manner. Supported by information on material requirements, time limits, and resources, Classroom Community Builders provides handouts and worksheets, available both within the book and online, offering new ideas to experienced and novice instructors alike.

Research Papers For Dummies Teacher Created Resources

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

A thinking student is an engaged student Teachers often find it difficult to implement lessons that help students go beyond rote memorization and repetitive calculations. In fact, institutional norms and habits that permeate all classrooms can actually be enabling "non-thinking" student behavior. Sparked by observing teachers struggle to implement rich mathematics tasks to engage students in deep thinking, Peter Liljedahl has translated his 15 years of research into this practical guide on how to move toward a thinking classroom. Building Thinking Classrooms in Mathematics, Grades K-12 helps teachers implement 14 optimal practices for thinking that create an ideal setting for deep mathematics learning to occur. This guide Provides the what, why, and how of each practice and answers teachers' most frequently asked questions Includes firsthand accounts of how these practices foster thinking through teacher and student interviews and student work samples Offers a plethora of macro moves, micro moves, and rich tasks to get started Organizes the 14 practices into four toolkits that can be implemented in order and built on throughout the year When combined, these unique research-based practices create the optimal conditions for learner-centered, student-owned deep mathematical thinking and learning, and have the power to transform mathematics classrooms like never before.

Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about

teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.
