Rubrics offer concrete artefacts of what schools evaluate to be of merit, and what educators and schools value to be worth rewarding.

Assessment Rubrics Decoded offers insights into a myriad of issues that affect, and are affected by, the construction of merit in students' learning and the articulation of (underlying) educational ideologies in the assessment of student achievement. Designed for both students and teachers – who should have parity of involvement in developing and using rubrics – this book covers the problematic issues of assessment in schools while offering readers practical solutions to navigating the ensuing tensions and dilemmas. The notion that rubrics may hinder assessment transparency is also discussed, with examples, to warn against uncritical use of rubrics that may discipline rather than help learners. The perspective of a school leader in providing

assessment leadership to rubrics usage across a school is included for extending awareness of rubrics beyond classroom contexts. This provides an informed approach for teachers to understand the stakes and complexities involved in judging learning, and learners, whilst offering concrete options and suggestions to consider. This book will be a valuable resource for classroom teachers, school leaders, teacher educators and researchers interested in the field of assessment rubrics.

The affective, non-cognitive aspects of feedback are also targeted; such as how learners react emotionally to receiving feedback. The exploration of the theoretical underpinnings of how feedback changes the course of instruction leads to practical advice on how to give such feedback effectively in a variety of diverse contexts. Anyone interested in researching instructional feedback, or providing it in their class or course, will discover why, when, and where instructional feedback is effective and how best to provide it.

Middle Grades Research Journal Scholastic Inc. "This wonderfully compact introduction to rubrics will serve higher education teachers well [and]

when departments or groups of faculty use rubrics as described in this book, they will indeed achieve the 'academic currency' sought today in higher education." -- Amy Driscoll, director of Teaching, Learning and Assessment CSU, Monterey Bay. You need rubrics if:* You find yourself repeating the same comments on most student papers* You worry that you're grading the latest papers differently from the first* You're concerned about communicating the complexity of a semester-long assignment* You question the consistency of your and your colleagues' grading scales * Grading is taking up far too much of your valuable timeResearch shows that rubrics save professors' time while conveying meaningful and timely feedback for students, and promoting self-regulated and independent learning. The reason rubrics are little used in higher education is that few faculty members have been exposed to their use.At its most basic a rubric is a scoring tool that divides an assignment into its component parts and objectives, and provides a detailed description of what constitutes acceptable and unacceptable levels of performance for each part.Rubrics can be used to grade any assignment or task: research papers, book reviews, participation in discussions, laboratory work, portfolios, oral presentations, group work, and more.This book defines what rubrics are, and how to construct and use them. It provides a complete introduction for anyone starting out to integrate rubrics in their teaching.The authors go on to describe a variety of processes to construct rubrics, including some which involve student participation. They demonstrate how interactive rubrics -- a process involving assessors and the assessed in defining the criteria for an assignment or objective -- can be effective, not only in involving students more actively in their learning, but in establishing consistent standards of assessment at the program, department and campus level. "A valuable resource for the new user in a content discipline and belongs in every faculty developer's library." -- Edward Nuhfer, Director, Center for Teaching and Learning, Idaho State University
