Ben Hogan's former ball shagger recounts firsthand stories of the golf legend—and reveals, for the first time, Hogan's Swing Secret, a source of mystery to golfers for more than fifty years. Ben Hogan's pro golf record is legendary. A four-time PGA Player of the Year, he celebrated sixty-three tournament wins and became known as a man of few words and fewer close friends. Most of what we know about Hogan has been based on myth and speculation. Until now. In the 1960s, though Hogan's competitive career was over, he kept the practice habits that made him famous and remade modern competitive golf. He hired seventeen-year-old Jody Vasquez to help. Each day, after driving to a remote part of the course at Shady Oaks Country Club, Hogan would spend hours hitting balls and Vasquez would retrieve them. There, and over the course of their twenty-year friendship, Hogan taught Jody the mechanics of his famous swing and shared his thoughts on playing, practicing, and course management—unknowingly revealing much about his character, values, and beliefs, and the events that shaped them. In Afternoons with Mr. Hogan, Jody Vasquez shares dozens of stories about Hogan, from the way he practiced, selected his clubs, and interacted with other star players to his little-known humor and generosity. Combining the gentle insight of Tom Kite's A Fairway to Heaven (which recalls Kite's golf education under Harvey Penick) with the sage perspective of Penick's own Little Red Book, Vasquez's tribute is funny, poignant, and full of advice for golfers of all levels.

Using Arabic is a guide to Arabic usage for students who have already acquired the basics of the language and wish to extend their knowledge. Focusing mainly on Modern Standard Arabic, it is divided into three clear sections on varieties of Arabic, grammar, and vocabulary. Varieties of Arabic describes the linguistic situation in the Arab world, showing students variations in register through the use of authentic texts. The vocabulary section is designed not only to expand students knowledge of Arabic words, but also to show them which words are most current, and which are appropriate to different registers. The final chapter provides an overview of Arabic grammar, giving many modern-day examples, and highlighting common errors. Clear, readable and easy to consult, Using Arabic will prove an invaluable reference for students seeking to improve their fluency and confidence in Arabic.

This book describes the design and implementation of the BSD operating system--previously known as the Berkeley version of UNIX. Today, BSD is found in nearly every variant of UNIX, and is widely used for Internet services and firewalls, timesharing, and multiprocessing systems. Readers involved in technical and sales support can learn the capabilities and limitations of the system; applications developers can learn effectively and efficiently how to interface to the system; systems programmers can learn how to maintain, tune, and extend the system. Written from the unique perspective of the system's architects, this book delivers the most comprehensive, up-to-date, and authoritative technical information on the internal structure of the latest BSD system. As in the previous book on 4.3BSD (with Samuel Leffler), the authors first

update the history and goals of the BSD system. Next they provide a coherent overview of its design and implementation. Then, while explaining key design decisions, they detail the concepts, data structures, and algorithms used in implementing the system's facilities. As an in-depth study of a contemporary, portable operating system, or as a practical reference, readers will appreciate the wealth of insight and guidance contained in this book. Highlights of the book: Details major changes in process and memory management Describes the new extensible and stackable filesystem interface Includes an invaluable chapter on the new network filesystem Updates information on networking and interprocess communication

The Oxford Companion to Philosophy AuthorHouse

Rudolf Carnap and W. V. Quine, two of the twentieth century's most important philosophers, corresponded at length—and over a long period of time—on matters personal, professional, and philosophical. Their friendship encompassed issues and disagreements that go to the heart of contemporary philosophic discussions. Carnap (1891-1970) was a founder and leader of the logical positivist school. The younger Quine (1908-) began as his staunch admirer but diverged from him increasingly over questions in the analysis of meaning and the justification of belief. That they remained close, relishing their differences through years of correspondence, shows their stature both as thinkers and as friends. The letters are presented here, in full, for the first time. The substantial introduction by Richard Creath offers a lively overview of Carnap's and Quine's careers and backgrounds, allowing the nonspecialist to see their writings in historical and intellectual perspective. Creath also provides a judicious analysis of the philosophical divide between them, showing how deep the issues cut into the discipline, and how to a large extent they remain unresolved.

It refines the study of healing within Roman provincial culture, identifies diagnostic features of healing in material culture and offers a more contextualised reading of ancient medical literary and documentary papyri and archaeological evidence. This study differs from previous attempts to examine healing in Roman Egypt in that it tries, as far as possible, to encompass the full spectrum of healing strategies available to the inhabitants of the province. The first part of this study comprises two chapters and focuses on the practitioners of healing strategies, both 'professional' and 'amateur'. Chapter 2 examines those areas of ancient medicine that have traditionally been neglected or summarily dismissed by scholars: 'domestic' and 'folk' medicine with particular emphasis on the extent to which the specific natural environment of any given location affects healing strategies.

Search has been vital to artificial intelligence from the very beginning as a core technique in problem solving. The authors present a thorough overview of heuristic search with a balance of discussion between theoretical analysis and efficient implementation and application to real-world problems. Current developments in search such as pattern databases and search with efficient use of external memory and parallel processing units on main boards and graphics cards are detailed. Heuristic search as a problem solving tool is demonstrated in applications for puzzle solving, game playing, constraint satisfaction and machine learning. While no previous familiarity with heuristic search is necessary the reader should have a basic knowledge of algorithms, data structures, and calculus. Real-world case studies and chapter ending exercises help to create a full and realized picture of how search fits into the world of artificial intelligence and the

one around us. Provides real-world success stories and case studies for heuristic search algorithms Includes many AI developments not yet covered in textbooks such as pattern databases, symbolic search, and parallel processing units

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

Ahlan Wa Sahlan, Sound & Script Workbook Univ of California Press

This is a Hebrew grammar with a difference, being the first truly discourse-based grammar. Its goal is for students to understand Biblical Hebrew as a language, seeing its forms and conjugations as a coherent linguistic system, appreciating why and how the text means what it says-rather than learning Hebrew as a set of random rules and apparently arbitrary meanings. Thirty-one lessons equip learners for reading the biblical text in Hebrew. They include sections on biblical narrative, poetry, and the Masora-as well as of the text of the Hebrew Bible, lexica, and concordances. The examples and exercises are all taken directly from the biblical text, so that students can check their work against any relatively literal version of the Bible. The vocabulary lists include all of the words that occur fifty times or more in the Hebrew Bible. Special also to this Grammar are the 'enrichments': brief sections at the end of each chapter encouraging students to apply their grammatical knowledge to specific questions, issues, or passages in the biblical text. Appendices include a Vocabulary of all Hebrew words and proper names that occur fifty times or more, and a Glossary and index of technical terms-as well as complete nominal, pronominal, and verbal paradigms, and an annotated bibliography. The learner-friendly design of this Grammar has been endorsed by faculty and by students who have used pre-publication versions to teach themselves Biblical Hebrew, both individually, in classes, and in informal groups.
