I was diagnosed with colon cancer when I was 43, in the summer of 2015. That's young for a cancer patient. The symptoms were weird and were not
what is commonly associated with colon cancer. After major surgery in early 2016, the plan was to get me back on my feet within 6 months. Sadly,
the common treatment method of chemotherapy did not work in my case. Turns out I have some genetic defects that lead to an aggressive form of
uber nasty cancer, rendering most conventional treatment options useless. As a result, my hospital decided to turn me away, knowing they had no
idea how to help me going forward. Seemingly left to die with no further treatment options, the power of the universe put me in touch with a crack
team of doctors at Mount Sinai Hospital in Miami Beach. These people were not so easy to give up on me just yet. They suggested immunotherapy,
the same treatment that miraculously cured Jimmy Carter. And it worked wonders! In only two months I went from a sleep deprived wreck, living with
constant pain, unable to walk without a wheelchair or a stick, to cycling 10 miles a day. And all that without major side effects. If that's not a miracle
then I don't know what is! BROKEN BOWELS is my personal account of these horrific yet truly amazing years I have endured. I've had countless
chemotherapy and radiation treatments and survived terrible side effects. I've had 6 surgeries, I've had a colostomy for almost two years and an
ileostomy for three months. I've lived without solid food for nearly a year, and for many months I've endured every type of catheter known to man,
until I very nearly lost my whole bladder. My doctors call me a Super Survivor. supersurvivor.tv

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of
adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic
science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic
Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National
Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic
science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration.
Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of
systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation
programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal
prosecutors and attorneys, and forensic science educators.
