It is commonly believed that populist politics and social media pose a serious threat to our concept of truth. Philosophical pragmatists, who are typically thought to regard truth as merely that which is 'helpful' for us to believe,

are sometimes blamed for providing the theoretical basis for the phenomenon of 'post-truth'. In this book, Sami Pihlström develops a pragmatist account of truth and truth-seeking based on the ideas of William James, and defends a thoroughly pragmatist view of humanism which gives space for a sincere search for truth. By elaborating on James's pragmatism and the 'will to believe' strategy in the philosophy of religion, Pihlström argues for a Kantian-inspired transcendental articulation of pragmatism that

recognizes irreducible normativity as a constitutive feature of our practices of pursuing the truth. James himself thereby emerges as a deeply Kantian thinker. Departmental & Divisional Manuals Sovereignty Education and Defense Ministry (SEDM) JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor,

and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. "The son of the Wolf" (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, "The Call of the Wild" (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including "The Sea-Wolf" (1904), "White Fang" (1906), "South Sea Tales" (1911), and "Jerry of the South Seas" (1917). One of London's most interesting novels is the semi-autobiographical "Martin Eden" (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

A dark and atmospheric thriller for fans of T M Logan's LIES and Liz Lawler's DON'T WAKE UP. Leo Fisch is a young man with a brilliant future ahead of him. He is bright, sociable and on the verge of moving in with his girlfriend, Kathryn. Outwardly, at least, he seems happy. When a sinister discovery is made in a forest near Leo's home town, a figure from childhood re-enters his life. David Caldwell is tough and aggressive – the very opposite of the company Leo now keeps. Unlikely friends, they are bound by a shared summer – and secret – they had sworn to forget. As the past and present begin to collide, the life Leo has built for himself starts to unravel. Now Leo must confront the boy he once was, and the events of that summer which threaten to destroy them both...

This book is for people involved in working with plastic material and plastic fabricating processes. The information and data in this book are provided as a comparative guide to help in understanding the performance of plastics and in making the decisions that must be made when developing a logical approach to fabricating plastic products to meet performance requirements at the lowest costs. It is formatted to allow for easy reader access and this care has been translated into the individual chapter constructions and index. This book makes very clear the behaviour of the 35,000 different plastics with the different behaviours of the hundreds of processes. Products reviewed range from toys to medical devices, to cars, to boats, to underwater devices, containers, springs, pipes, aircraft and spacecraft. The reader's product to be designed and/or fabricated can be directly or indirectly related to plastic materials, fabricating processes and/or product design reviews in this book.*Essential for people involved in working with plastic material and plastic fabricating processes *Will help readers understand the performance of plastics *Helps readers to make decisions which meet performance requirements and to keep costs low

In contemporary philosophy, substantive moral theories are typically classified as either

consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

This is a legal text that analyzes the Companies Act of 1882, which has been a cornerstone of Indian business law for well over a century. The book explores the history of the act, its provisions, and its impact on Indian commerce and industry. It analyzes key cases that have shaped the development of company law in India, and offers practical advice and guidance for businesses operating under the act. Separations have always been very important in chemical engineering. This importance has recently escalated with the imminent emergence of new industries in biotechnology and high-performance materials. Separations will continue

to remain important in bulk chemical manufacturing, petroleum processing, and the other standard areas of chemical engineering interest. The development of new industries requiring the expertise of chemical engineers leads to problems and opportunities for chemical engineering education. Chemical engineering students need to be prepared for both the "known future" and the "unknown future." The known future includes the use of standard chemical engineering separation methods such as distillation and absorption which will remain important for many years. The unknown future involves the use of many relatively new separation methods such as adsorption, chromatography, electrophoresis, membrane separations. A major question for chemical engineering education is what to teach. In the area of separations my personal answer has been to require undergraduates to study classical separations including distillation, adsorption and extraction. Then an elective course on newer methods which require a mass transfer analysis should be made available to seniors and graduate students. I would not mind if this second course were required of graduate students; certainly, that would be preferable to an additional distillation course. My first book, *Equilibrium-Staged Separations*, was my response for the required undergraduate course. This book is my response

to both the proposed second course, and to practicing chemical engineers who missed this material when they were in school.

This classic textbook in the field, now completely revised and updated, provides a bridge between theory and practice. Appropriate for the second course in Finance for MBA students and the first course in Finance for doctoral students, the text prepares students for the complex world of modern financial scholarship and practice. It presents a unified treatment of finance combining theory, empirical evidence and applications. "Handbook of Plastic Processes is the only comprehensive reference covering not just one, but all major processes used to produce plastic products-helping designers and manufacturers in selecting the best process for a given product while enabling users to better understand the performance characteristics of each process. The authors, all experts in their fields, explain in clear, concise, and practical terms the advantages, uses, and limitations of each process, as well as the most modern and up-to-date technologies available in their application."--Publisher's website.
