The work of conservation biology has grown from local studies of single species into a discipline concerned with mapping and managing biodiversity on a global scale. Remote sensing, using satellite and aerial imaging to measure and map the environment, increasingly provides a vital tool for effective collection of the information needed to research and set policy for conservation priorities. The perceived complexities of remotely sensed data and analyses have tended to discourage scientists and managers from using this valuable resource. This text focuses on making remote sensing tools accessible to a larger audience of non-specialists, highlighting strengths and limitations while emphasizing the ways that remotely sensed data can be captured and used, especially for evaluating human impacts on ecological systems.

influences on each other. The historical scope of the anthology, beginning with the famous Orientalist Sir William Jones and the anonymous “Anna Maria” and ending with Indian poets publishing in fin-de-siècle London, will enable teachers and students to understand what brought Kipling early fame and why at the same time Tagore’s Gitanjali became a global phenomenon. Anglophone Poetry in Colonial India, 1780–1913 puts all parties to the poetic conversation back together and makes their work accessible to American audiences. With accurate and reliable texts, detailed notes on vocabulary, historical and cultural references, and biographical introductions to more than thirty poets, this collection significantly reshapes the understanding of English language literary culture in India. It allows scholars to experience the diversity of poetic forms created in this period and to understand the complex religious, cultural, political, and gendered divides that shaped them.
