Maimonides was the greatest Jewish philosopher and legal scholar of the medieval period, a towering figure who has had a profound and lasting influence on Jewish law, philosophy, and religious consciousness. This book provides a comprehensive and accessible introduction to his life and work, revealing how his philosophical sensibility and outlook informed his interpretation of Jewish tradition. Moshe Halbertal vividly describes Maimonides's childhood in Muslim Spain, his family's flight to North Africa to escape persecution, and their eventual resettling in Egypt. He draws on Maimonides's letters and the testimonies of his contemporaries, both Muslims and Jews, to offer new insights into his personality and the circumstances that shaped his thinking. Halbertal then turns to Maimonides's legal and philosophical work, analyzing his three great books--Commentary on the Mishnah, the Mishneh Torah, and the Guide of the Perplexed. He discusses Maimonides's battle against all attempts to personify God, his conviction that God's presence in the world is mediated through the natural order rather than through miracles, and his locating of philosophy and science at the summit of the religious life of Torah. Halbertal

examines Maimonides's philosophical positions on fundamental questions such as the nature and limits of religious language, creation and nature, prophecy, providence, the problem of evil, and the meaning of the commandments. A stunning achievement, Maimonides offers an unparalleled look at the life and thought of this important Jewish philosopher, scholar, and theologian.

In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.
