Briefly, a boot loader is the first
software program that runs when a
computer starts. It is responsible
for loading and transferring control
to an operating system kernel
software (such as Linux or GNU
Mach). The kernel, in turn,
initializes the rest of the operating
system (e.g. a GNU system). GNU
GRUB is a very powerful boot
loader, which can load a wide
variety of free operating systems, as
well as proprietary operating
systems with chain-loading. GRUB
is designed to address the
complexity of booting a personal
computer; both the program and

this manual are tightly bound to that computer platform, although porting to other platforms may be addressed in the future. One of the important features in GRUB is flexibility; GRUB understands filesystems and kernel executable formats, so you can load an arbitrary operating system the way you like, without recording the physical position of your kernel on the disk. Thus you can load the kernel just by specifying its file name and the drive and partition where the kernel resides. This manual is available online for free at gnu.org. This manual is printed in grayscale.

Die Interaktionsgestaltung

bewegt sich in einem Spannungsfeld zwischen Konventionen und Innovationen. Die Vertrautheit konventioneller Bedienkonzepte steht im scheinbaren Widerspruch zur teils radikalen Neuartigkeit innovativer Ansätze. Aufbauend auf Diskursen und Betrachtungen unterschiedlicher wissenschaftlicher Disziplinen (wie der Techniksoziologie, der Innovationsforschung oder der Kommunikationstheorie) erarbeitet Marcel Münchow

ein designwissenschaftliches Theoriegebilde zur Deutung dieser bidirektionalen Wechselwirkungen zwischen Konventionen und Innovationen im Kontext der Mensch-Maschine-Interaktion.
