Briefly, a boot loader is the first software program that runs when a computer starts. It is responsible for loading and transferring control to an operating system kernel software (such as Linux or GNU Mach). The kernel, in turn, initializes the rest of the operating system (e.g. a GNU system). GNU GRUB is a very powerful boot loader, which can load a wide variety of free operating systems, as well as proprietary operating systems with chain-loading. GRUB is designed to address the complexity of booting a personal computer;

both the program and this manual are tightly bound to that computer platform, although porting to other platforms may be addressed in the future. One of the important features in GRUB is flexibility; GRUB understands filesystems and kernel executable formats, so you can load an arbitrary operating system the way you like, without recording the physical position of your kernel on the disk.

Thus you can load the kernel just by specifying its file name and the drive and partition where the kernel resides. This manual is available online for free at gnu.org. This manual is printed in grayscale.

Die Interaktionsgestaltung bewegt sich in einem

Spannungsfeld zwischen Konventionen und Innovationen. Die Vertrautheit konventioneller Bedienkonzepte steht im scheinbaren Widerspruch zur teils radikalen Neuartigkeit innovativer Ansätze. Aufbauend auf Diskursen und Betrachtungen unterschiedlicher wissenschaftlicher Disziplinen (wie der Techniksoziologie, der Innovationsforschung oder der Kommunikationstheorie) erarbeitet Marcel Müchow ein designwissenschaftliches Theoriegebilde zur Deutung dieser bidirektionalen Wechselwirkungen zwischen Konventionen und Innovationen im Kontext der Mensch-Maschine-Interaktion.

Most businesses depend on their rankings on Google, Yahoo!, and other search engines to drive traffic to their websites. The higher a business's ranking, the more traffic its site gets. Where does a webmaster or online market manager go for advice and instruction on optimizing a business's website for higher search engine rankings? The few search engine optimization (SEO) books currently on the market are dated and do not cover the latest local, mobile, and social marketing techniques. The Complete Idiot's Guide® to Search Engine Optimization is a comprehensive, up-to-date, easy-to-use guide for SEO. It starts with a general overview of how search engines and SEO work and then flows into specific techniques for basic website optimization. It addresses the analysis and ongoing maintenance of a site's optimization and finishes with a look at how search engine marketing fits within a company's overall online marketing plan. In The Complete Idiot's Guide® to Search Engine Optimization, readers learn- How search engines and SEO work. How to optimize your site's keywords, tags, and design. How to optimize the links to your site, local and mobile searches, and social media. How to apply the strategies to a blog and web videos for search engines. How to use third-

party SEO tools. How search engine marketing fits within a company's overall online marketing plan.

Welcome to the proceedings of CloudComp 2009. A computing cloud is more than a collection of computer resources, because it provides mechanisms to manage those resources. In a cloud computing platform, software is migrating from the desktop to the "clouds," promising users, at any time and anywhere, access to their programs and data. This year, 44 academic, industrial and student papers from all over the world were submitted, of which 17 were accepted as regular long papers. Additionally, three were included as short papers on hot topics. The Program Committee appreciates the time and effort of all of the researchers put into preparing their papers. Many thanks also to the members of the Program Committee and the external reviewers for all of their hard work in reading, evaluating, and providing detailed feedback. Without the contributions of both of these groups, CloudComp would not have been such a lively symposium. The symposium featured keynote addresses by Jesus Villasante, Head of Unit, European Commission, Dane Walther, Director of Custom Engineering, Akamai Technologies Inc. Cambridge, MA, USA, Greg Malewicz, Google, Mountain View, CA, USA, and Mauro Campanella, Consortium GARR, Italy. A scientific visit of the Leibniz Supercomputer Centre (LRZ), Bavarian

Academy of Science, Garching (Munich), was organized during the conference. The visit was hosted by Prof. A. Bode. We feel that the symposium will grow and develop in its service to the research community within both academia and industry.
