The Radio Today Guide to the Icom IC-7300 The Radio Today Guide to the Yaesu FTDX101 This book includes useful tips and tricks for the configuration and operation of the amazing Yaesu FTDX101D and FTDX101MP transceivers. Rather than duplicate the manuals which describe each button, function, and control individually, I have used a more functional approach. This is a "how to do it" book with easy to follow, step-by-step instructions. For example, I describe how to set up the transceiver for SSB operation. Then I follow that up for CW, FM, RTTY, PSK, and external digital mode software such as FT8. The aim is not to replace the manual but to more fully explain how to configure and operate the radio to take advantage of its many great features. For example, when I cover the front panel controls, I explain not only what the control does, but how and when to use it. Along the way, I offer a few 'tips' on how I configured my radio. You don't have to follow these suggestions, but they provide some guidance. The FTDX101 transceivers have superb technical specifications, and the FTDX101D currently holds the top position on the highly regarded Sherwood Engineering transceiver performance table. The book covers both variants of the transceiver. The FTDX101 is a truly exceptional radio for contesting or working DX stations. Learn about the dual receivers, the band scope display, and the new FT8 Preset. This book will help you get the most from this complicated transceiver. The Radio Today Guide to the Icom IC-7300 This book includes useful tips and tricks for the configuration and operation of the fabulous Icom IC-7300 transceiver. Rather than duplicate the manuals which describe each button, function, and control, I have used a more functional approach. This is a "how to do it" book with easy to follow step by step instructions. The IC-7300 has created something of a revolution in the amateur radio world. With this radio, Icom provides the advantages of SDR technology in a format that is familiar for users of their earlier transceivers. Most importantly the IC-7300 has many features that were previously only available on much more expensive radios. My Body Politic

This book sets out a vision of pervasive IT through intelligent spaces and describes some of the progress that has been made towards its realisation. The context for intelligent spaces (or iSpaces) is the world where information and communication technology (ICT) disappears as it becomes embedded into physical objects and the spaces in which we live and work. The ultimate vision is that this embedded technology provides us with intelligent and contextually relevant support, augmenting our lives and our experience of the physical world in a benign and non-intrusive manner. The enormous advances in hardware, system design, and software that are being achieved enable this vision. In particular, the performance advances and cost reductions in hardware components - processors, memory, storage, and communications - are making it possible to embed intelligence and communications ability into lower cost objects. The Internet is a living experiment in building complex, distributed systems on a global scale. In software, there have been solid advances in creating systems that can deal with complexities on the scale required to interact with human activity, in limited domains at least. The ultimate vision is challenging, and there are many obstacles to its realisation.

Humans now wield a greater influence on the planet than any other species in history, and human-developed technologies like genetic engineering and artificial intelligence stand poised to overtake biological evolution. Just how did we arrive at this unique moment in human history, 14 billion years after the birth of the universe Sydney Brenner's 10-on-10: The Chronicles of Evolution brings together 24 prominent scientists and thinkers to trace the story of evolution through ten logarithmic scales of time. Through expert insights, this unique volume considers how humans found our place in the cosmos, and imagines what lies ahead. SolderSmoke is the story of a secret, after-hours life in electronics. Bill Meara started out as a normal kid, from a normal American town. But around the age of 12 he got interested in electronics, and he has never been the same. To make matters worse, when he got older he became a diplomat. His work has taken him to Panama, Honduras, El Salvador, the Spanish Basque Country, the Dominican Republic, the Azores islands of Portugal, London, and, most recently, Rome. In almost all of these places his addiction to electronics caused him to seek out like-minded radio fiends, to stay up late into the night working on strange projects, and to build embarrassingly large antennas above innocent foreign neighborhoods. SolderSmoke takes you into the basement workshops and electronics parts stores of these exotic foreign places, and lets you experience the life of an expatriate geek. If you are looking for restaurant or hotel recommendations, look elsewhere. But if you need to know where to get an RF choke re-wound in Santo Domingo, SolderSmoke is the book for you. SolderSmoke is no ordinary memoir. It is a technical memoir. Each chapter contains descriptions of Bill's struggles to understand (really understand) radio-electronic theory. Why does $P=IE$? Do holes really flow through transistors? What is a radio wave? How does a frequency mixer produce sum and difference frequencies? If these are the kinds of questions that keep you up at night, this book is for you. Finally, SolderSmoke is about brotherhood. International, cross-border brotherhood.

Through the SolderSmoke podcast we have discovered that all around the world, in countries as different as Sudan and Switzerland, there are geeks just like us, guys with essentially the same story, guys who got interested in radio and electronics as teenagers, and who have stuck with it ever since. Our technical addiction gives us something in common, something that transcends national differences. And our electronics gives us the means to communicate. United by a common interest in radio, and drawn closer together by means of the internet, we form an "International Brotherhood of Electronic Wizards."

This book includes useful tips and tricks for the configuration and operation of the amazing Icom IC-9700 VHF and UHF transceiver. Rather than duplicate the manuals which

describe each button, function, and control, I have used a more functional approach. This is a "how to do it" book with easy to follow step by step instructions. The IC-9700 is a ground breaking amateur radio transceiver. It is the first full power, multi-mode, VHF/UHF amateur radio transceiver to be based on SDR technology. With this radio, Icom provides the perfect companion to the IC-7300. It is a transceiver for VHF and UHF DX operation, working satellites, EME, and repeater operation, supporting both traditional FM repeaters and D-Star digital. Many of the features included in the IC-9700 have never been available on VHF/UHF amateur radio transceivers before. All of these great features make the IC-9700 quite a complicated radio to configure and operate. The Radio Today guide to the Icom IC-9700 will help you to get the most out of this incredible transceiver.

World radio TV handbook University of Michigan Press
With the ancient epic Mahabharat as her source, and the battle of Kurukshetra as a central motif, Mahasweta Devi weaves three stories in which we visit unexpected alleys and by-lanes of the traditional epic saga, and look at events from the eyes of women marginalized, dispossessed, dalit. Their eyes condemn the wanton waste and inhumanity of war. This Kurukshetra is not the legendary Dharmayuddha of the popular imagination but rather a cold-blooded power game sacrificing countless human lives. How do the women s quarters of the palace, a colourless place of shadowy widowhood, appear to five peasant women whose lives are no less shattered by the Kurukshetra massacre, but who are used to dealing with trauma in a more robust manner? How does their outlook on life and survival influence the young pregnant princess who is abruptly plunged into the half-life of uppercaste widowhood? How does a lower caste serving woman, who was brought in to service king Dhritarashtra when his queen was with child, view her half-royal offspring and his decision to perform the last rites for a father who never acknowledged him as a son? How does an ageing Kunti, living out her last years in the forest, come to terms with her guilt over her unacknowledged son, Karna? And, having finally voiced her shame aloud, how then does she

face up to a crime she has not even remembered: the murder of a family of nishad forest dwellers? These tales, brewed in the imagination of a master story-teller, make us look at the Mahabharata with new eyes, insisting as they do on the inclusion, within the master narrative, of the fates and viewpoints of those previously unrepresented therein: women and the underclass. MAHASWETA DEVI is one of India s foremost writers. Her powerful, satiric fiction has won her recognition in the form of the Sahitya Akademi (1979), Jnanpith (1996) and Ramon Magsaysay (1996) awards, the title of Officier del Ordre Des Arts Et Des Lettres (2003) and the Nonino Prize (2005), amongst several other literary honours. She was also awarded the Padmasree in 1986, for her activist work amongst dispossessed tribal communities. ANJUM KATYAL is as an editor who has also translated several plays and short stories.
