A searing indictment of US strategy in Afghanistan from a distinguished military leader and West Point military historian— " A remarkable book " (National Review). In 2008, Col. Gian Gentile exposed a growing rift among military intellectuals with an article titled " Misreading the Surge Threatens U.S. Army ' s Conventional Capabilities, " that appeared in World Politics Review. While the years of US strategy in Afghanistan had been dominated by the doctrine of counterinsurgency (COIN), Gentile and a small group of dissident officers and defense analysts began to question the necessity and efficacy of COIN—essentially armed nation-building—in achieving the United States ' limited core policy objective in Afghanistan: the destruction of Al Qaeda. Drawing both on the author ' s experiences as a combat battalion commander in the Iraq War and his research into the application of counterinsurgency in a variety of historical contexts, Wrong Turn is a brilliant summation of Gentile ' s views of the failures of COIN, as well as a trenchant reevaluation of US operations in Afghanistan. " Gentile is convinced that Obama ' s ' surge ' in

The definitive history of the Defense Advanced Research Projects Agency, the Pentagon agency that has quietly shaped war and technology for nearly sixty years. Founded in 1958 in response to the launch of Sputnik, the agency's original mission was to create "the unimagined weapons of the future." Over the decades, DARPA has been responsible for countless inventions and technologies that extend well beyond military technology. Sharon Weinberger gives us a riveting account of DARPA's successes and failures, its remarkable innovations, and its wild-eyed schemes. We see how the threat of nuclear Armageddon sparked investment in computer networking, leading to the Internet, as well as to a proposal to power a missile-destroying particle beam by draining the Great Lakes. We learn how DARPA was responsible during the Vietnam War for both Agent Orange and the development of the world's first armed drones, and how after 9/11 the agency sparked a national controversy over surveillance with its data-mining research. And we see how DARPA's success with self-driving cars was followed by disappointing contributions to the Afghanistan and Iraq wars. Weinberger has interviewed more than one hundred former Pentagon officials and scientists involved in DARPA's projects—many of whom have never spoken publicly about their work with the agency—and pored over countless declassified records from archives around the country, documents obtained under the Freedom of Information Act, and exclusive materials provided by sources. *The Imagineers of War* is a compelling and groundbreaking history in which science, technology, and politics collide.

Few global security issues stimulate more fervent passion than the application of brute force. Despite the fierce debate raging about it in government, society and the Academy, inadequate strategic

---

understanding surrounds the issue, prompting the urgent need for —the first comprehensive systematic global analysis of 21st century state-initiated internal and external applications of brute force. Based on extensive case evidence, Robert Mandel assesses the short-term and long-term, the local and global, the military, political, economic, and social, and the state and human security impacts of brute force. He explicitly isolates the conditions under which brute force works best and worst by highlighting force initiator and force target attributes linked to brute force success and common but low-impact force legitimacy concerns. Mandel comes to two major overarching conclusions. First, that the modern global application of brute force shows a pattern of futility—but one that is more a function of states' misapplication of brute force than of the inherent deficiencies of this instrument itself. Second, that the realm for successful application of state-initiated brute force is shrinking: for while state-initiated brute force can serve as a transitional short-run local military solution, he says, it cannot by itself provide a long-run global strategic solution or serve as a cure for human security problems. Taking the evidence and his conclusions together, Mandel provides policy advice for managing brute force use in the modern world.

the years 1935 – 2009. The original edition, published in 1976, was the first and only comprehensive biographical work on contemporary political figures in any language and served as the prototype for the Mexican government's brief foray into its own official biographical directory. The Mexican Supreme Court has cited every biography of justices in the third edition as the basis of its biographies in the late 1980s. With updates of the existing biographies and appendices, plus almost 1,000 additional biographies, this fourth edition now features close to 3,000 entries and serves as a unique resource list of the chronological occupants of all leading national political posts. The need for such information has become even more pronounced since Mexico's political transformation from a semi-authoritarian to a democratic model. This latest edition allows readers access to information about Mexican politicians into the new century, and like its earlier versions, will be a valuable tool for government officials, journalists, historians, social scientists, the business community, and students. Finally, it includes a detailed bibliographic essay that identifies and explains the significance of biographical sources and has been enhanced by numerous up-to-date Internet sources. ICT plays a crucial role in the pursuit of modernization in the countries of Slovenia, Croatia, Albania and Bulgaria, which form the South Eastern European (SEE) region., The quest for Euro-Atlantic integration and the undeniable necessity for direct foreign investment have encouraged the SEE countries to invest in the development of cyber technology, and it has become the dominant area for social, economic and political interaction within the region. This has had both positive and negative consequences. This book presents the proceedings of the NATO Advanced Training Course (ATC), held in Ohrid, former Yugoslav Republic of Macedonia, in December 2014. The ATC addressed serious concerns about terrorist use of cyber technology in South Eastern Europe, which not only has the potential to destabilize regional efforts to create a platform for increased development by creating a breeding ground for the training of extremists and the launching of cyber attacks, but also represents a direct and indirect threat to the security and stability of other NATO partner countries. The book will be of interest to all those involved in countering the threat posed by terrorist use of the Internet worldwide.

As if combating vicious narco-syndicates were not a sufficiently formidable challenge, the Mexican government has assigned such additional roles to the Army and Navy as overseeing customs agents, serving as state and municipal security chiefs, taking charge of prisons, protecting airports, safeguarding migrants, functioning as firefighters, preventing drug trafficking around schools, establishing recreational programs for children, and standing guard 24-hours a day over boxes of ballots cast in recent elections. This expansion of duties has sparked the accusation that Mexico is being "militarized." An exemplary team of professionals provides a comprehensive look at sex education, the heated debate over federal controls, current research and practice, programs, politics, legislation, and cultural and religious issues related to sex and sexuality education. In the groundbreaking *Sexuality Education: Past, Present, and Future*, the history, practices, and politics of sexuality education are explained. Respected educators, counselors, and therapists marshal both research and educated opinion to offer insights into exactly what is meant by "sex education," what the various approaches are, what "age appropriate" lessons are supported by most professionals, and the impact of government policies. Noting that the need for sexuality education has expanded to adults, from new parents to senior citizens, this unique work also takes readers into classrooms and makes them privy to conversations representing everyone from elementary school students to nursing home residents.

These comments reveal the range of unanswered questions about sex—questions that are important for psychological, as well as physical health. In addition, the contributors explore ongoing issues in sexuality education, such as how to present "culturally competent" lessons that include consideration of race, ethnicity, gender, religion, and sexual

orientation. The experts also examine sexuality education in other countries, the challenges those countries face, and their victories over unplanned pregnancy and STDs in the global effort to preserve sexual health.

Ever since 1989, the Faculty of Organizational Sciences, University of Belgrade, has been the host of SymOrg, an event that promotes scientific disciplines of organizing and managing a business. Traditionally, the Symposium has been an opportunity for its participants to share and exchange both academic and practical knowledge and experience in a pleasant and creative atmosphere. This time, however, due the challenging situation regarding the COVID-19 pandemic, we have decided that all the essential activities planned for the International Symposium SymOrg 2020 should be carried out online between the 7th and the 9th of September 2020. We are very pleased that the topic of SymOrg 2020, “ Business and Artificial Intelligence ” , attracted researchers from different institutions, both in Serbia and abroad. Why is artificial intelligence a disruptive technology? Simply because “ it significantly alters the way consumers, industries, or businesses operate. ” According to the European Commission document titled Artificial Intelligence for Europe 2018, AI is a key disruptive technology that has just begun to reshape the world. The Government of the Republic of Serbia has also recognized the importance of AI for the further development of its economy and society and has prepared an AI Development Strategy for the

period between 2020 and 2025. The first step has already been made: the Science Fund of the Republic of Serbia, after a public call, has selected and financed twelve AI projects. This year, more than 200 scholars and practitioners authored and co-authored the 94 scientific and research papers that had been accepted for publication in the Proceedings. All the contributions to the Proceedings are classified into the following 11 sections:

- Information Systems and Technologies in the Era of Digital Transformation
