"The best explanation that I have seen of corrosion on boats."—Nigel Calder, author of Boatowner’s Mechanical and Electrical Manual “A powerful weapon in the war against metal deterioration.”—Cruising World Corrosion is a constant, often expensive, and sometimes dangerous problem for boaters. Moisture, salt, electrical currents, and chemicals create a potent combination that can attack the metallic (and sometimes nonmetallic) parts of your boat. Everett Collier, an expert in marine technology, details all the types of corrosion—including simple galvanic, electrochemical, and electrolytic—and explains how to identify, combat, and prevent them. The most comprehensive book on this subject, The Boatowner's Guide to Corrosion shows you how to: Prevent corrosion with proper grounding, cathodic protection, protective coatings, and careful selection and matching of metal parts Protect your boat’s hull, deck gear, masts, and rigging, as well as its propulsion, electrical, plumbing, and steering

Written in G-flat major, the song's tempo is "very calm and sweetly expressive," and the best elements of impressionism are revealed in the sweeping phrases, parallelism, and sixth and seventh chords. Performance notes and English translations are included.

From every "beautiful mornin'" to "some enchanted evening," the songs of Oscar Hammerstein II are part of our daily lives, his words part of our national fabric. Born into a theatrical dynasty headed by his grandfather and namesake, Oscar Hammerstein II breathed new life into the moribund art form of operetta by writing lyrics and libretti for such classics as Rose-Marie (music by Rudolf Friml), The Desert Song (Sigmund Romberg), The New Moon (Romberg) and Song of the Flame (George Gershwin). Hammerstein and Jerome Kern wrote eight musicals together, including Sweet Adeline, Music in the Air, and their masterpiece, Show Boat. The vibrant Carmen Jones was Hammerstein's all-black adaptation of the tragic opera by Georges Bizet. In 1943, Hammerstein, pioneer in the field of operetta, joined forces with Richard Rodgers, who had for the previous twenty-five years taken great strides in the field of musical comedy with his longtime writing partner, Lorenz Hart. The first Rodgers and Hammerstein work, Oklahoma!, merged the two styles into a completely new genre—the musical play—and simultaneously launched the most successful partnership in American musical theater. Over the next seventeen years, Rodgers and Hammerstein wrote eight more Broadway musicals: Carousel, Allegro, South Pacific, The King and I, Me and Juliet, Pipe Dream, Flower Drum Song, and The Sound of Music. They also wrote a movie musical (State Fair) and one for television (Cinderella). Collectively their works have earned dozens of awards, including Pulitzers, Tonys, Oscars, Grammys, and Emmys. Throughout his career, Hammerstein created works of lyrical beauty and universal feeling, and he continually strove—sometimes against fashion—to seek out the good and beautiful in the world. "I know the world is filled with troubles and many injustices," he once said. "But reality is as beautiful as it is ugly . . . I just couldn't write anything without hope in it." All of his lyrics are here—850, more than a quarter published for the first time—in this sixth book in the indispensable Complete Lyrics series that has also brought us the lyrics of Cole Porter, Lorenz Hart, Ira Gershwin, Irving Berlin, and Frank Loesser. From the young scribe's earliest attempts to the old master's final lyric—"Edelweiss"—we can see, read, and, yes, sing the words of a theatrical and lyrical genius.

Thomas D. Rossing String instruments are found in almost all musical cultures. Bowed string instruments form the backbone of symphony orchestras, and they are used widely as solo instruments and in chamber music as well. Guitars are used universally in pop music as well as in classical music. The piano is probably the most versatile of all musical instruments, used widely not only in ensemble with other musical instruments but also as a solo instrument and to accompany solo instruments and the human voice. In this book, various authors will discuss the science of plucked, bowed, and hammered string instruments as well as their electronic counterparts. We have tried to tell the fascinating story of scientific research with a minimum of mathematics to maximize the usefulness of the book to performers and instrument builders as well as to students and researchers in musical acoustics. Sometimes, however, it is difficult to "translate" ideas from the exact mathematical language of science into words alone, so we include some basic mathematical equations to express these ideas. It is impossible to discuss all families of string instruments. Some instruments have been researched much more than others. Hopefully, the discussions in this book will help to encourage further scientific research by both musicians and scientists alike. 1.1 A Brief History of the Science of String Instruments Quite a number of good histories of acoustics have been written (Lindsay 1966, 1973; Hunt 1992; Beyer 1999), and these histories include musical acoustics.

Modelling and simulation in acoustics is currently gaining importance. In fact, with the development and improvement of innovative computational techniques and with the growing need for predictive models, an impressive boost has been observed in several research and application areas, such as noise control, indoor acoustics, and industrial applications. This led us to the proposal of a special issue about "Modelling, Simulation and Data Analysis in Acoustical Problems", as we believe in the importance of these topics in modern acoustics' studies. In total, 81 papers were submitted and 33 of them were published, with an

acceptance rate of 37.5%. According to the number of papers submitted, it can be affirmed that this is a trending topic in the scientific and academic community and this special issue will try to provide a future reference for the research that will be developed in coming years.
