Creating comes out of the reality that all that is made is from God and our makings come from the larger backdrop of God's creative canvas. This book is the culmination of creative reflections from Alabaster's lived experiences as a company. We are invited to participate in all that is made through our creating. We are invited to create through the lens of imaging new possibilities, believing in

generosity, advocating for others, contemplating mystery, and pushing through failure. We are invited to create good and beautiful things in the world. This small, beautiful book maintains Alabaster's aesthetic sensibilities--featuring imagery and design that complements and engages the written reflections.

Social Democracy is on the back-foot, and increasingly centre-left

political parties are struggling to win office. Bringing together a range of leading academics and experts on social democratic politics and policy, Why the left loses offers an international, comparative view of the changing political landscape, examining the degree to which the centre-left project is exhausted and is able to renew its message in a neo-liberal age. Using case studies from the UK, Germany, Spain, France, Australia and New Zealand contributors argue that despite different local and specific contexts, the mainstream centre-left is beset by a range of common challenges. Analysis focuses on institutional and structural factors, the role of key individuals, especially party leaders, and the atrophy of progressive ideas in explaining why the centre-left is currently in retreat. Why the Left Loses is aimed at stimulating wider debate about the fortunes of the centre-left.

If you are aspiring to build a racing car, How to Build Motorcycle-engined Racing Cars could be the book that you 've been waiting for! Tony Pashley revisits the path that he took in the Pashley Project articles in Race Tech magazine during the design and construction of two successful hillclimb cars, but this time in great detail, with a view to enabling the reader to carry out a similar exercise for themselves. Although hillclimb and sprint cars are the focal topic, a lot of the book is applicable to race cars in general. The cars under discussion in the book are powered by motorcycle engines, which are meeting with great success in the smaller racing car classes. The total process of building a car is described, beginning with the selection and procurement of the engine. Chassis and suspension design is covered in a simplistic but adequate manner as the author ' s aim is to minimize the inclusion of involved calculations.

Two recipes for chassis construction are illustrated in detail, along with guidance on the processes of construction and a description of the required equipment. Following on from this, the fabrication of the suspension is explained. Further chapters are dedicated to the remaining aspects of the vehicle, covering transmission, brakes, fuel and coolant systems, and electrics. The book is heavily illustrated with 200 photographs and extensive explanatory diagrams and tables. It is a vital addition to any would-be kit car builder's library. Trees played a particularly important part in the rural economy of Anglo-Saxon England, both for wood and timber and as a wood-pasture resource, with hunting gaining a growing cultural role. But they are also powerful icons in many pre-Christian religions, with a degree of tree symbolism found in Christian scripture too. This wide-ranging book explores both the "real", historical and archaeological evidence of trees and woodland, and as they are depicted in Anglo-Saxon literature and legend. Place-name and charter references cast light

upon the distribution of particular tree species (mapped here in detail for the first time) and also reflect upon regional character in a period that was fundamental for the evolution of the present landscape. In the first volume, Killingly revealed the initial manufacturing emphasis in the town's villages. Killingly Revisited illustrates how the town survived after losing most of the textile industry, as it moved South, by actively seeking diversified commercial businesses. Within these pages, the town's fascinating past is displayed as newly acquired vintage views are coupled with information recently uncovered from the Killingly Historical and Genealogical Society's newspaper archives and other reference materials. In celebration of 300 years as an incorporated Connecticut town, the society is sharing photographs of Killingly's mills, businesses, buildings, churches, schools, and cemeteries. There have been losses from devastating fires that changed the face of Main Street. New streets and roads were added as modes of transportation changed. There are also new views of citizens at work and play.

All That Is Made

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of

being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.
