When we think of composers, we usually envision an isolated artist separate from the orchestra—someone alone in a study, surround by staff paper—and in Europe and

America this image generally has been accurate. For most of Japan's musical history, however, no such role existed—composition and performance were deeply intertwined. Only when Japan began to embrace Western culture in the late nineteenth century did the role of the composer emerge. In *Composing Japanese Musical Modernity*, Bonnie Wade uses an investigation of this new musical role to offer new insights not just into Japanese music but Japanese modernity at large and global cosmopolitan culture. Wade examines the short history of the composer in Japanese society, looking at the creative and economic opportunities that have sprung up around them—or that they forged—during Japan's astonishingly fast modernization. She shows that modernist Japanese composers have not bought into the high modernist concept of the autonomous artist, instead remaining connected to the people. Articulating Japanese modernism in this way, Wade tells a larger story of international musical life, of the spaces in which tradition and modernity are able to meet and, ultimately, where modernity itself has been made.

This book addresses core questions about the role of materials in general and of wood in particular in the construction of string instruments used in the modern symphony orchestra – violins, violas, cellos and basses. Further attention is given to materials for classical guitars, harps, harpsichords and pianos. While some of the approaches discussed are traditional, most of them depend upon new scientific approaches to the study of the structure of materials, such as for example wood cell structure, which is visible only using modern high resolution microscopic techniques. Many examples of modern and classical instruments are examined, together with the relevance of classical techniques for the treatment of wood. Composite materials, especially designed for soundboards could be a good substitute for some traditional wood species. The body and soundboard of the instrument are of major importance for their acoustical properties, but the study also examines traditional and new wood species used for items such as bows, the instrument neck, string pegs, etc. Wood species' properties for musical instruments and growth origins of woods used by great makers such as Antonio Stradivari are examined and compared with more recently grown woods available to current makers. The role of varnish in the

appearance and acoustics of the final instrument is also discussed, since it has often been proposed as a 'secret ingredient' used by great makers. Aspects related to strings are commented. As well as discussing these subjects, with many illustrations from classical and contemporary instruments, the book gives attention to conservation and restoration of old instruments and the physical results of these techniques. There is also discussion of the current value of old instruments both for modern performances and as works of art having great monetary value. The book will be of interest and value to researchers, advanced students, music historians, and contemporary string instrument makers. Musicians in general, particularly those playing string instruments, will also find its revelations fascinating. It will also attract the attention of those using wood for a variety of other purposes, for its use in musical instruments uncovers many of its fundamental features. Professor Neville H. Fletcher Australian National University, Canberra

The Sound Reinforcement Handbook Hayden

Tuning, Timbre, Spectrum, Scale focuses on perceptions of consonance and dissonance, and how these are dependent on timbre. This also relates to musical scale: certain timbres sound more consonant in some scales than others. Sensory consonance and the ability to measure it have important implications for the design of audio devices and for musical theory and analysis. Applications include methods of adapting sounds for arbitrary scales, ways to specify scales for nonharmonic sounds, and techniques of sound manipulation based on maximizing (or minimizing) consonance. Special consideration is given here to a new method of adaptive tuning that can automatically adjust the tuning of a piece based its timbral character so as to minimize dissonance. Audio examples illustrating the ideas presented are provided on an accompanying CD. This unique analysis of sound and scale will be of interest to physicists and engineers working in acoustics, as well as to musicians and psychologists.

From every “beautiful mornin’” to “some enchanted evening,” the songs of Oscar Hammerstein II are part of our daily lives, his words part of our national fabric. Born into a theatrical dynasty headed by his grandfather and namesake, Oscar Hammerstein II breathed new life into the moribund art form of operetta by writing lyrics and libretti for such classics as *Rose-Marie* (music by Rudolf Friml), *The Desert Song* (Sigmund Romberg), *The New Moon* (Romberg) and *Song of the Flame* (George Gershwin). Hammerstein and Jerome Kern wrote eight musicals together, including *Sweet Adeline*, *Music in the Air*, and their masterpiece, *Show Boat*. The vibrant *Carmen Jones* was Hammerstein’s all-black adaptation of the tragic opera by Georges Bizet. In 1943, Hammerstein, pioneer in the field of operetta, joined forces with Richard Rodgers, who had for the previous twenty-five years taken great strides in the field of musical comedy with his longtime writing partner, Lorenz Hart. The first Rodgers and Hammerstein work, *Oklahoma!*, merged the two styles into a completely new genre—the musical play—and simultaneously launched the most successful partnership in American musical theater. Over the next seventeen years, Rodgers and Hammerstein

wrote eight more Broadway musicals: *Carousel*, *Allegro*, *South Pacific*, *The King and I*, *Me and Juliet*, *Pipe Dream*, *Flower Drum Song*, and *The Sound of Music*. They also wrote a movie musical (*State Fair*) and one for television (*Cinderella*). Collectively their works have earned dozens of awards, including Pulitzers, Tonys, Oscars, Grammys, and Emmys. Throughout his career, Hammerstein created works of lyrical beauty and universal feeling, and he continually strove—sometimes against fashion—to seek out the good and beautiful in the world. “I know the world is filled with troubles and many injustices,” he once said. “But reality is as beautiful as it is ugly . . . I just couldn’t write anything without hope in it.” All of his lyrics are here—850, more than a quarter published for the first time—in this sixth book in the indispensable *Complete Lyrics* series that has also brought us the lyrics of Cole Porter, Lorenz Hart, Ira Gershwin, Irving Berlin, and Frank Loesser. From the young scribe’s earliest attempts to the old master’s final lyric—“Edelweiss”—we can see, read, and, yes, sing the words of a theatrical and lyrical genius.
