One Woman's Adventure Through Africa

Haynes Manuals N. America, Incorporated
In 2011, at the height of tension between the British and Iranian governments, travel writer Lois Pryce found a note left on her motorcycle outside the Iranian Embassy in London: ... I wish that you will visit Iran so you will see for yourself about my country. WE ARE NOT TERRORISTS!!! Please come to my city, Shiraz. It is very famous as the friendliest city in Iran, it is the city of poetry and gardens and wine!!! Your Persian friend, Habib Intrigued, Lois decides to ignore the official warnings against travel (and the warnings of her friends and family) and sets off alone on a 3,000 mile ride from Tabriz to Shiraz, to try to uncover the heart of this most complex

and incongruous country. Along the way, she meets carpet sellers and drug addicts, war veterans and housewives, doctors and teachers - people living ordinary lives under the rule of an extraordinarily strict Islamic government. Revolutionary Ride is the story of a people and a country. Religious and hedonistic, practical and poetic, modern and rooted in tradition - and with a wild sense of humour and appreciation of beauty despite the comparative lack of freedom - this is real contemporary Iran.

The book presents the theory of motorcycle dynamics. It is a technical book for the engineer, student, or technically/mathematically

inclined motorcycle enthusiast. Motorcycle Dynamics offers a wealth of information compiled from the most up-to-date research into the behavior and performance of motorcycles. The structure of the book and abundant graphs assist in understanding an exceptionally complicated subject. The book presents a large number of graphs and figures that make the understanding easy.

Numerical Methods for Engineers

Haynes Manuals N. America, Incorporated

Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-

vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the

OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained. Ella Maillart was the adventurous Swiss woman who made her name as an intrepid explorer and one of the most remarkable woman travelers of the early twentieth century. An amazing sports woman, she first represented her country as the only woman competitor at the

1924 Paris Olympics in the single-handed boat-sailing contest, then later raced for Switzerland as a member of the international ski team. Yet these outdoor activities only developed Maillart's insatiable curiosity to travel east, leaving behind the confines of her early life in Geneva in search of the perfect life that she was instinctively seeking. Her later adventures took her across many continents and various oceans. Maillart sailed the Mediterranean in a yawl, traveled with famed travel English travel writer Peter Fleming from Peking to Kashmir, explored Tibet with a half-wild tiger-cat in search of spiritual

enlightenment, and finally drove 4,000 miles from war-torn Europe to the fabled Khyber Pass in a battered Ford car. Yet her solo journey through Central Asia in the early 1930s was considered to be a highlight of her adventure-filled life. Setting off from the Tien Shan mountains of Mongolia, Maillart rode horses and camels to the far away walls of fabled Bokhara. Turkestan Solo is her vivid account of this wonderful, mysterious and dangerous portion of the world, complete with its Kirghiz eagle hunters, lurking Soviet secret police, and the timeless nomads that still inhabited the desolate steppes

of Central Asia. If any book can give its reader the ability to look back in time, this one does, written as it was by one of the world's foremost female equestrian explorers. Amply illustrated, it remains a timeless adventure classic.

The Sibirsky (Siberian) Extreme Project was a 2009 motorcycle adventure project by motorcycle adventurer Walter Colebatch to attempt to go into the ultimate depths of Siberia. The project aimed to push

the boundaries of what is known and what is possible in terms of motorcycling in Siberia and hoped to ride new routes and tracks that had yet to be explored by adventure motorcyclists to date. On the ambitious schedule were: - the Tuva Track, a vague boggy unriden route linking the Altai and Tuvan Republics, near the Mongolian border, between the towns of Kosh Agach and Mugur Aksy - the Anabar Road from Lensk to Udachny, an unriden route leading further north in Asia than anyone had ridden before (over 66 degrees North). - the Vilyuisky Trakt, an unriden dirt track only completed in early 2009 that runs 1500 kms east (950 miles) between Lensk, Mirny and Yakutsk. - the

legendary BAM Road, 4300 km from Vanino on the Pacific Ocean to Taishet in central Siberia; an abandoned road no motorcyclist had ever even attempted in its entirety, let alone ridden. To many adventurers, the BAM Road is the toughest road on the planet. This book covers the planning, the riding, the struggles, the triumphs and the disappointments of this incredibly challenging itinerary.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America ' s premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede ' s wildly popular Race Tech Suspension Seminars, this step-by-step guide

shows anyone how to make their bike, or their kid ' s, handle like a pro ' s. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension ' s condition. He outlines testing procedures that will help you gauge how well you ' re improving your suspension, along with your riding. And, if you ' re inclined to perfect your bike ' s handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book

even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Young and beautiful, Lois Pryce was a rising star at the BBC.

Unbeknownst to her co-workers, Lois lived a parallel life as a biker babe with an overwhelming sense of wanderlust. So she packed in her career to ride her motorcycle on her own from the northernmost tip of Alaska to the southernmost tip of South America. Alone. Armed only with the Spanish words for 'caution' and 'cheese', Lois was rather under-prepared for multiple bear sightings, bribing her way through

borders, spending a night in a Mexican brothel and crashing her bike in the wilds of Patagonia. She most certainly got the adventure she craved, and her pulse-pounding, soul-searching adventure has already attracted fans worldwide - a weblog that she kept whilst on her travels was receiving more than two-thousand hits a day. Her hilarious, brilliantly written travelog will appeal to anyone who's ever dreamt of jacking-it-all-in and running away to see the world.
