This book offers a comprehensive and timely
overview of internal combustion engines for use in
marine environments. It reviews the development of
modern four-stroke marine engines, gas and
gas-diesel engines and low-speed two-stroke
crosshead engines, describing their application
areas and providing readers with a useful snapshot
of their technical features, e.g. their
dimensions, weights, cylinder arrangements,
cylinder capabilities, rotation speeds, and
exhaust gas temperatures. For each marine engine,
information is provided on the manufacturer,
historical background, development and technical
characteristics of the manufacturer's most popular
models, and detailed drawings of the engine,
depicting its main design features. This book
offers a unique, self-contained reference guide
for engineers and professionals involved in
shipbuilding. At the same time, it is intended to
support students at maritime academies and
university students in naval architecture/marine
engineering with their design projects at both
master and graduate levels, thus filling an
important gap in the literature.
