This book traces the post-war
development of gas turbine engines
for use in passenger cars and
commercial vehicles in the UK,
Germany, Italy and the USA. It is
based on interviews with leading
engineering figures of the day as
well as reports by journalists.
The work also contains photographs
of engines and vehicles as well as
diagrams of various gas turbine
engines.

This book offers a comprehensive and timely
overview of internal combustion engines for
use in marine environments. It reviews the
development of modern four-stroke marine
engines, gas and gas–diesel engines and low-
speed two-stroke crosshead engines,
describing their application areas and
providing readers with a useful snapshot of
their technical features, e.g. their
dimensions, weights, cylinder arrangements,
cylinder capabilities, rotation speeds, and
exhaust gas temperatures. For each marine
engine, information is provided on the
manufacturer, historical background,
development and technical characteristics of
the manufacturer's most popular models,
and detailed drawings of the engine,
depicting its main design features. This book
offers a unique, self-contained reference
guide for engineers and professionals
involved in shipbuilding. At the same time,
it is intended to support students at maritime
academies and university students in naval
architecture/marine engineering with their
design projects at both master and graduate
levels, thus filling an important gap in the
literature.
