[Educational Technology and Polycontextual Bridging](#) SAGE

This work provides a theoretical basis for the thesis that intelligence is fundamentally a problem of representing -- making sense of experience and representations of it. The theory has its basis in Peirce and Einstein. It is contended that a comprehensive theory of semiotic abilities is critical to educational and psychological testing and measurement theory.

11+ English Practice Papers Galore Park

Lexical inferencing is a central process in both reading comprehension and word learning through reading. This volume presents a comprehensive research review on second language lexical inferencing (with Kirsten Haastrup) and a major new study of first and second language lexical inferencing by speakers of Persian, French and English, focusing on first language transfer effects.

Based on the analysis of a specially compiled corpus of internationally recognized English as a foreign language (EFL) reading tests at different levels of proficiency, this volume explores the relation between the complexity of written texts and the difficulty of reading comprehension tests. It brings together linguistic investigations into the text-inherent complexity of the tests and a study of the data derived from their administration to groups of Italian university students. The study of text complexity draws on corpus linguistics, text linguistics and systemic functional linguistics. Both quantitative and qualitative analyses are carried out on the language used in the reading texts and in the related tasks that make up the corpus of tests. The assessment of test difficulty, on the other hand, is informed by research on language testing, and, in particular, by findings and methodologies of Classical Test Theory and Item Response Theory. Relevant aspects of these theories are used to analyze and interpret both the data obtained from the administration of the tests and the data collected by means of feedback questionnaires completed by test takers. The application of such diverse methodologies and the subsequent comparison of the results of the analyses has brought out interesting correlations between text-inherent complexity, perceived test difficulty and actual test difficulty.

An increasing number of multilingual students, often with a migration background, are attending elementary schools in Germany these days. Also on the rise is the number of schools offering a bilingual program, where content subjects such as science and mathematics are taught in a foreign language. This book explores minority and majority language students' German and English reading and writing skills in elementary schools which offer either regular English-as-subject lessons or bilingual programs with varying degrees of English intensity. The focus is on effects of foreign language input intensity with respect to students' language background, gender, cognitive abilities, and socio-economic background. This book also provides recommendations for English reading and writing activities in the elementary school classroom.

[Research-based Methods of Reading Instruction for English Language Learners, Grades K-4](#) Guilford Publications

Early literacy instruction typically emphasizes foundational skills--often at the expense of engaging young children in reading and supporting their comprehension of different types of texts. This book explains the essential elements of comprehension and shares a wealth of classroom-tested instructional practices. It presents developmentally informed strategies for scaffolding comprehension skills, using content to promote engagement, and implementing high-level discussions and writing tasks. Ways to teach and assess English learners and other diverse students are highlighted throughout. The book features explicit links to the Common Core State Standards (CCSS) as well as helpful reproducible forms. Purchasers get access to a Web page where they can download and print the reproducible materials in a convenient 8 1/2" x 11" size.

This book contains clear chapter objectives, suggestions for further reading on each topic and a glossary explaining key terms that the new or trainee teacher will need to understand. The authors have all taught English in the primary setting, are experienced teacher trainers and respected practitioners in their own specialist fields.

[Proceedings of the 1st EAI Bukittinggi International Conference on Education, BICED 2019, 17-18 October, 2019, Bukittinggi, West Sumatera, Indonesia](#) Springer

Technology has become ubiquitous in nearly every contemporary situation, while digital media have acquired considerable importance in the lives of young people. Alongside their interest in digital media, schooling constitutes a core component of the life of children and adolescents. Youth 's use of digital media creates tensions between traditions and expectations of renewal within the school. The once-sharp divide between school and leisure time is eroding. How will the school as an institution relate to this comprehensive process of change known as the digital revolution? How can the school build a bridge between the world of youth and school material to enable students to learn in a new digital age? This endeavor is named polycontextual bridging in this book. What are the good examples of polycontextual bridging? What novel educational goals can be achieved by net-related activities when incorporated into the school, and how can out-of-school learning be successfully framed by educational purposes? These questions are addressed from different perspectives by several scholars in this book. The chapters in this volume offer the most thorough, up-to-date discussion on the challenges of technology use in school education. In tackling the critical issues created by technology, this book provides an important resource for student teachers, teachers, education scholars and those interested in a critical examination of digital expectations and experiences in school education. This book is motivated by a pressing need to come to grips with the dilemmas caused by an apparent clash of learning cultures in the individual classroom, in the schools, in the education of teachers, and in the institutions of teacher education. The book is also a tribute to Gavriel Salomon and his research on the cognitive effects of media's symbol systems, media and learning, and the design of cognitive tools and technology-afforded learning environments. The book also contains his masterpiece " It ' s not just the tool, but the educational rationale that counts " . Further, three internationally recognized experts – Howard Gardner, David Perkins, and Daniel Bar-Tal – describe Salomon ' s remarkable academic contributions. This book is an attempt to explicate, illustrate, and critically examine the idea of polycontextual bridging between youth ' s leisure cultures and school material to enable students to learn in a new digital age. The authors do not present a common front on the complex question of the proper use of information and communication technology in the school but instead present a diversity of arguments and viewpoints. The book is an attempt to raise questions and start a debate.
