Scarlett Baron explores the works of two of the most admired and mythologized masters of nineteenth- and twentieth-century prose: Gustave Flaubert (1822-1880) and James Joyce (1882-1941). She uncovers the lifelong fascination that Joyce harboured for Flaubert and investigates how this heightened interest inflected his own creative practice.

"Enter these enchanted woods ye who dare," is the famous, dictum from Sean O'Faolain about Portrait. As with all of Joyce's works, Portrait rewards its readers, over and over again, with its inexhaustible richness. It is a most enveloping and enchanting book, and Weldon Thornton's latest exploration of its world makes a major contribution to Joyce scholarship. Thornton takes a fresh look at important psychological and cultural issues in the novel, arguing that although it may be a classic text of literary modernism, it' is a fundamentally antimodernist work. The novel reflects a distance between Joyce and Stephen not simply in its tone or in certain differences between author and character but in its very structure and verbal texture. Thornton's comprehensive and thoughtful book provides readers with a new cultural critique and intellectual history of Portrait, which promises to become one of the major discussions of the novel.

The Athenæum Basic Books
The book is full of vivid people and places. The conflicts are intense and compelling and heartbreaking. This is a rich book-emotionally, psychologically, intellectually. It's the best kind of creative nonfiction. It's both topical and poignant.-Mark Spencer, author of Ghost Walking and A Haunted Love Story Patrice Johnson weaves a powerful account of her son's life as a fugitive of the US government. Her creative nonfiction work shows the price of living in a post-9/11 world and the limitations of law and order. It reveals the degradations of homelessness and the resilience of the human spirit. Tyler Johnson has a bright future ahead of him. Major scientific journals have published his research in quantum physics and in artificial intelligence, and he has recently graduated from Caltech. He has a position in a doctoral program at the University of New Mexico waiting for him, but before he can arrive at the school, everything changes. Tyler and his friend Danny Blair plan to affix bumper stickers in protest of gas guzzling vehicles at SUV dealerships in California. The evening of binge drinking spins out of control, and a Hummer catches on fire. Suddenly, Tyler, a brilliant presidential merit scholar, is labeled an environmental extremist, a domestic terrorist. He has two choices. He can come forward and risk spending the rest of his years in prison, or he can run for his life with the woman he loves.

Tyler runs. The story that follows shows the ramifications of one impulsive mistake and a young man's struggle against seemingly irreversible consequences. It serves as a warning flag to all who may feel tempted to cross to the wrong side of the law. A portion of the royalties will be donated to the Longmont Community Justice Partnership, LCJP.

"Travelling in the retinue of an impoverished Russian General, young teacher Alexei seeks solace in the dream of a life-changing win at the roulette table. As the general sinks deeper into debt and the long-awaited inheritance from his ailing grandmother fails to materialise, Alexei's frustrated financial and sentimental aspirations gain momentum. When Grandmama herself turns up at Roulettenburg and starts gambling away her family possessions with Alexei's assistance, all those who seek to gain from her death look on with ill-concealed horror. And as passion, hatred and unadulterated greed rise to the surface, Dostoevsky creates a darkly psychological novel of truly extraordinary vision." "Based on Dostoevsky's own troubled experiences at the gaming tables, The Gambler is a telling portrayal of a man crippled by the overwhelming powers of addiction and obsession." --Book Jacket.

The Last Man Who Knew Everything
Deep and lasting learning results when we teach human brains in ways responsive to how they're structured and how they function, which is not how we imagine they work or wish they would work. This book proposes a radical restructuring of teaching so that it conforms to how people learn. Spence maintains that teaching cannot and should not be aimed at transferring knowledge from teacher brains into student brains. In his words: "Decades of experience have made perfectly clear that this approach frustrates teachers, bores students, and results in minimal learning." This is a book that challenges—it will poke and prod your thinking. The author writes near the end of Chapter 4, "I wanted to write a book that asked real questions and explored possible answers. I am not concerned that you agree with my answers or ideas, but I fervently hope the questions I'm raising

will lead you to questions about habitual teaching practices and the resulting failure of students to learn.”

The Gambler

In 1942, a team at the University of Chicago achieved what no one had before: a nuclear chain reaction. At the forefront of this breakthrough stood Enrico Fermi. Straddling the ages of classical physics and quantum mechanics, equally at ease with theory and experiment, Fermi truly was the last man who knew everything—at least about physics. But he was also a complex figure who was a part of both the Italian Fascist Party and the Manhattan Project, and a less-than-ideal father and husband who nevertheless remained one of history's greatest mentors. Based on new archival material and exclusive interviews, *The Last Man Who Knew Everything* lays bare the enigmatic life of a colossus of twentieth century physics.
