Sergeant Steve Maharidge returned from World War II an angry man. The only evidence that he'd served in the Marines was a photograph of himself and a buddy tacked to the basement wall. On one terrifyingly memorable occasion his teenage son, Dale, witnessed Steve screaming at the photograph: "They said I killed him! But I didn't kill him! It wasn't my fault!" After Steve died, Dale Maharidge began a twelve-year quest to face down his father's wartime ghosts. He found more than two dozen members of Love Company, the Marine unit in which his father had served. Many of them, now in their eighties, finally began talking about the war. They'd never spoken so openly and emotionally, even to their families. Through them, Maharidge brilliantly re-creates Love Company's battles and the war that followed them home. In addition, Maharidge traveled to Okinawa to experience where the man in his father's picture died and meet the families connected to his father's wartime souvenirs. The survivors Dale met on both sides of the Pacific Ocean demonstrate that wars do not end when the guns go quiet—the scars and demons remain for decades.

Bringing Mulligan Home is a story of fathers and sons, war and postwar, silence and cries in the dark. Most of all it is a tribute to soldiers of all wars—past and present—and the secret burdens they

and their families, must often bear.

An optimistic--but realistic and feasible--action plan for fighting climate change while creating new jobs and a healthier environment: electrify everything. Climate change is a planetary emergency. We have to do something now—but what? Saul Griffith has a plan. In *Electrify*, Griffith lays out a detailed blueprint—optimistic but feasible—for fighting climate change while creating millions of new jobs and a healthier environment. Griffith's plan can be summed up simply: electrify everything. He explains exactly what it would take to transform our infrastructure, update our grid, and adapt our households to make this possible. Billionaires may contemplate escaping our worn-out planet on a private rocket ship to Mars, but the rest of us, Griffith says, will stay and fight for the future. Griffith, an engineer and inventor, calls for grid neutrality, ensuring that households, businesses, and utilities operate as equals; we will have to rewrite regulations that were created for a fossil-fueled world, mobilize industry as we did in World War II, and offer low-interest "climate loans." Griffith's plan doesn't rely on big, not-yet-invented innovations, but on thousands of little inventions and cost reductions. We can still have our cars and our houses—but the cars will be electric and solar panels will cover our roofs. For a world trying to bounce back from a pandemic and economic crisis, there is no other project that would create as many jobs—up to twenty-five million, according to one economic analysis. Is this politically possible? We can change politics along

with everything else.

What is Project Independence? The sources and uses of energy in the United States have changed dramatically in the last several decades. As a result, in just one generation, we have shifted from a position of domestic energy abundance to a substantial and continually growing reliance on foreign energy sources. Project Independence is a wide-ranging program to evaluate this growing dependence on foreign sources of energy, and to develop positive programs to reduce our vulnerability to future oil cut-offs and price increases.
