journalism, and includes writing by some of the greatest practitioners of the craft: Seymour Hersh on the My Lai massacre; Paul Foot on the Lockerbie cover-up; Wilfred Burchett, the first Westerner to enter Hiroshima following the atomic bombing; Israeli journalist Amira Hass, reporting from the Gaza Strip in the 1990s; Gunter Wallraff, the great German undercover reporter; Jessica Mitford on 'The American Way of Death'; Martha Gelhorn on the liberation of the death camp at Dachau. The book - a selection of articles, broadcasts and books extracts that revealed important and disturbing truths - ranges from across many of the critical events, scandals and struggles of the past fifty years. Along the way it bears witness to epic injustices committed against the peoples of Vietnam, Cambodia, East Timor and Palestine. John Pilger sets each piece of reporting in its context and introduces the collection with a passionate essay arguing that the kind of journalism he celebrates here is being subverted by the very forces that ought to be its enemy. Taken as a whole, the book tells an extraordinary 'secret history' of the modern era. It is also a call to arms to journalists everywhere - before it is too late.

Surrounded on all borders but its western coastline by hostile and aggressive neighbors, the state of Israel resembles the walled city of the Middle Ages. But its walls are not stone and mortar, they are flesh and blood—they are the soldiers, both men and women—the airmen, the intelligence, the tankscorpomen and the paratroops. These young people—from the old ghettos of Europe, from the cities of North Africa and Asia, native-born Sabras—are the protecting wall that keeps Israel free. The Walls of Israel is Jean Lart é guy ' s fascinating 1968 study of the Israeli armed forces. Talking with them, living with them, joining in their operations (he was taken along on a nighttime ambush set up to catch Syrian infiltrators), Lart é guy got to know the Israeli soldier as

few could. From this book, wide ranging and filled with lively anecdotes, emerges a picture of an army, tough and determined, yet intelligent and realistic enough to foresee a long and dangerous road ahead before a peace is won.

The science of Geodesy has undergone far-reaching changes in the last half century. The impact of new technology, from electromagnetic distance measurements to the use of artificial satellites, has been great, and is still largely to be felt. These changes have forced the practitioners of the ancient art of Earth measurement to alter their way of thinking about the space that surrounds us, something fundamentally more difficult than absorbing a new technology. A key influence in this modern change in geodetic thinking has been the work of Antonio Marussi, in his scientific publications from 1947 onwards, through his students and collaborators at the University of Trieste, and in the series of symposia on three-dimensional Geodesy which he organised with his great friend and collaborator, Martin Hotine. His influence on the latter, stemming from their first meeting at the General Assembly of the International Association of Geodesy in Oslo in 1948, was remarkable in itself, leading as it did to the ultimate publication of Hotine's *Mathematical Geodesy* in 1969.

*The Last Million Years* Springer Science & Business Media  
*International Tables for Crystallography Volume G*, Definition and exchange of crystallographic data, describes the standard data exchange and archival file format (the Crystallographic Information File, or CIF) used throughout crystallography. It provides in-depth information vital for small-molecule, inorganic and macromolecular crystallographers, mineralogists, chemists, materials scientists, solid-state physicists and others who wish to record or use the results of a single-crystal or powder diffraction experiment. The volume also provides the detailed data ontology necessary for programmers and database managers to design interoperable computer applications. The accompanying CD-ROM contains the CIF dictionaries in machine-readable form and a collection of libraries and utility programs. This volume is an essential guide and reference for programmers of crystallographic software, data managers handling crystal-structure information and practising crystallographers who need to use CIF.

smile. Without warning the heavy door would swing open and the waiters would come outside to join him. They were dressed in pajamas or prison garb, with hats and horns, and were there to warm up the crowd. Some in line expected this, others were shocked. The pink polka dot building should have been a warning. Complete strangers in line became chummy, exchanging stories they had heard; toilet seat covers to serve drinks on, microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a "Balls for the Queen" or a "Singing beer." The price was always right for a good time and Warm Beer and Lousy Food was the place to be.
