Open source provides the competitive advantage in the Internet Age. According to the August Forrester Report, 56 percent of IT managers interviewed at Global 2,500 companies are already using some type of open source software in their infrastructure and another 6 percent will install it in the next two years. This revolutionary model for collaborative software development is being embraced and studied by many of the biggest players in the high-tech industry, from Sun Microsystems to IBM to Intel. The Cathedral & the Bazaar is a must for anyone who cares about the future of the computer industry or the dynamics of the information economy. Already, billions of dollars have been made and lost based on the ideas in this book. Its conclusions will be studied, debated, and implemented for years to come. According to Bob Young, "This is Eric Raymond's great contribution to the success of the open source revolution, to the adoption of Linux-based operating systems, and to the success of open source users and the companies that supply them." The interest in open source software development has grown enormously in the past year. This revised and expanded paperback edition includes new material on open source developments in 1999 and 2000. Raymond's clear and effective writing style accurately describing the benefits of open source software has been key to its success. With major vendors creating acceptance for open source within companies, independent vendors will become the open source story in 2001.

A key mission of the Bureau of Engraving and Printing of the Department of the Treasury is the design and printing of U.S. banknotes. The BEP is responsible for producing easily recognizable currency that is difficult to counterfeit. In recent years, the bureau has recognized the modern information technology could lead to entirely new types of counterfeiting threats, and it has requested a number of studies by the NRC to assess these evolving threats. In this new request, the BEP asked the NRC to identify and evaluate significant emerging counterfeiting threats and to assess technologically feasible counterfeit-deterrent features for potential use in new designs. This first report provides an assessment of emerging threats including a wide range of digital imaging and printing techniques. It also presents an analysis of a systems approach to the counterfeiting threat. The second report will offer an evaluation of new banknote features to address these threats.
